Basic Propeller Information

PROPELLER BASICS:

This information is critical to determining the correct propeller for your application:

3 OR 4 BLADES?

A 3-blade propeller usually offers top speed performance while a 4-blade propeller provides a maximum thrust and smooth cruising operation.

DIAMETER:

Diameter is the distance across a circle encompassing all of the propeller blades. (See Original Equipment Considerations item 2 below).

PITCH:

Pitch is the theoretical distance a propeller will move through the water for each revolution (i.e. a 21" pitch propeller should move a boat forward 21" for each revolution, assuming there is no slippage).

ORIGINAL EQUIPMENT CONSIDERATIONS:

- 1. Determine the year, brand, model and horsepower of your motor.
2. Calculate the diameter of the OEM propeller by measuring from the center of the shaft hole to the tip of a blade x 2 (Example: a measurement of 7-1/4" - a diameter of 14-1/2").
3. Is the type of material aluminum or stainless steel?

RIGHT HAND OR LEFT HAND ROTATION?

In most cases, right hand propellers are used for single engine applications and one left hand propeller is used for twin engine applications to achieve better steering control.

CUPPED BLADES:

This is a technique used to enhance the performance of propellers under certain conditions. A cupped propeller will exhibit very high efficiency at high speeds as well as minimize cavitation under heavy loads.

RAKE:

Rake is a special design feature. Positive rake benefits from normal bow lift to permit the use of a larger diameter propeller, while negative rake can provide extra blade strength for use in very high speed applications.

PERFORMANCE CONSIDERATIONS:

- 1. Type of boat (cruiser, ski, runabout, bass, pontoon)?
2. Prop on boat now (brand, model, diameter, pitch, cupping)?
3. Engine RPM at wide open throttle (WOT)?
4. Speed of boat over water at WOT?
5. Normal operating altitude (motors lose 3% of power per 1000 ft.)?

PROPELLER APPLICATION

Table with columns for Solas Propeller, Outboard, Sterndrive, and Features. Rows list various boat models like Amita 3, Saturn, Titan, etc., and their compatibility with different propeller types and materials.

SOLAS Propeller Accessories Installation Instructions

MERCURY INSTALLATION

It is very important to refer to your Engine's Owner Manual for important safety precautions when installing the propeller. Use the original propeller hardware thrust washer, spacer, locking tab, nut, and cotter pin depending on engine/drive manufacturer. This is a Mercury installation instruction.

1. Put the **Thrust Washer** on propeller shaft, just as it came off. The taper on the **Thrust Washer** should mate properly with the taper on the propeller shaft.
2. **Grease the propeller shaft.**
3. Slide the propeller assembly onto the propeller shaft.
4. Install **Spacer** if required. Consult your engine/drive manual.
5. Install the **Tab Washer** if required. Consult your engine/drive manual.
6. Make sure the shaft splines are engaged with spines in space.
7. Install the **Shaft Nut**. Consult your engine/drive manual for proper torque.
8. Secure nut by bending tabs on the **Tab Washer** to engage slots in **Spacer**.

BRP, YAM, SUZ, TOH, HON, VOL AND YANMAR INSTALLATION
