MaximizerPro™

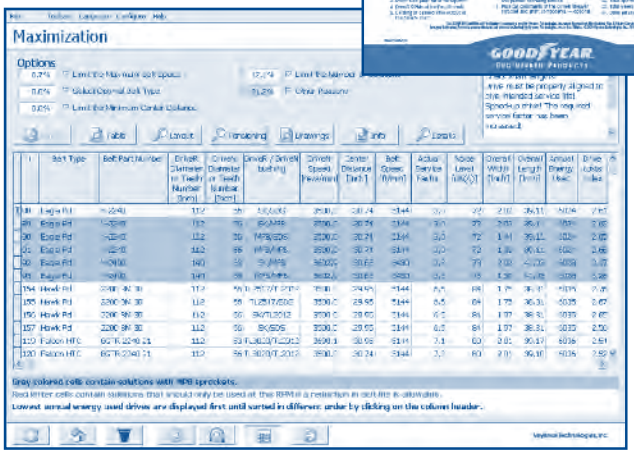
Drive Selection Analysis Program

MaximizerPro is an exciting program which allows the user to have Goodyear Engineered Products belt specifications and information right at their fingertips. It is easy to install and easy to use, making drive recommendations a snap. With MaximizerPro, drive requirements specified by the user are matched with available belts, sprockets, pulleys, and bushings. Working like an equation for improved performance, MaximizerPro takes specific physical data and calculates how the system can be upgraded with multiple options for belt drive designs. These options address the end-user's goals related to energy efficiency, quieter operation, increased output, and extended life to name a few.

The Data Collection Form:

The data collection form allows you to gather all of the drive specifications required to run the selection program. Specifications include:

- Drive Operation Time
- Horsepower Load
- DriveR and DriveN RPMs
- Center Distance
- Service Factor
- Energy Cost



The Maximization Screen:

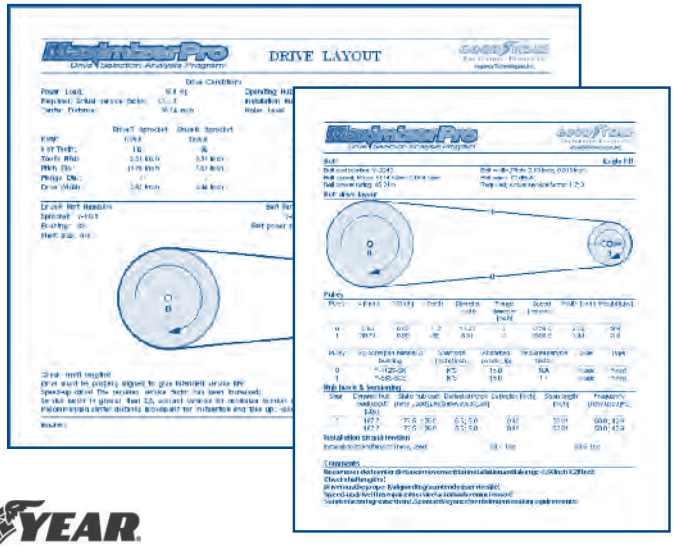
The maximization screen provides an easy way to view, sort and print the resulting selections. From the maximization screen, drive selections can be sorted by:

- Face Width
- Noise Level
- Energy Cost
- Service Factor
- Belt Speed
- Drive Cost Index

The Drive Design Printouts:

The printout function provides the pertinent information for the selected drive. Information available from the detail screen includes:

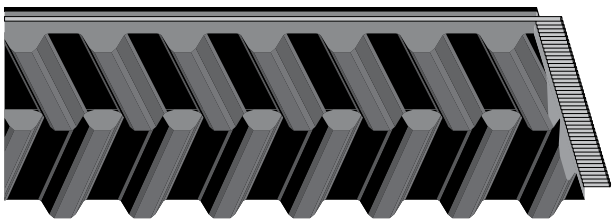
- Belt, sprocket, and bushing part numbers
- Engineered drawings on all drive part numbers (where applicable)
- Drive Layout
- Installation & Maintenance Tensioning



MaximizerPro is available by visiting our website at goodyearep.com/ptp.

EAGLE NRG™

NEW!



Part No: B-1750

B	Blue = 14 mm Pitch, 35 mm Width
1750	1750 mm Pitch Length

APPLICATIONS

Eagle NRG belts and sprockets are ideal on a wide variety of applications in all industries.

- Agricultural Equipment
- Packaging Conveyors
- Aggregate Crushers
- Poultry/Meat Grinders
- Wood Debarkers and Saws
- Mining Equipment
- Aluminum/Steel Conveyors
- Paper Presses
- Hog Dehairers
- Chain Drives
- Baking Mixers
- Textile Machines
- Horizontal Drives
- Printing Machines

KEY FEATURES & BENEFITS

- Reduced Noise
- Increased Horsepower
- Higher Efficiency
- Less Bearing Load
- Greater Precision
- Higher Temperature Operation
- Less Vibration
- Less Maintenance
- Compactness
- Self-Tracking
- Bidirectional
- Static Conductive*

THE EVOLUTION CONTINUES WITH THE NEXT GENERATION IN SYNCHRONOUS BELT TECHNOLOGY

Eagle NRG is the next generation in synchronous belt technology. This unique, state-of-the-art alternative to straight-tooth belts and drive chains has been enhanced to improve the overall performance of your drive design—and help you save Energy (NRG).

Eagle NRG is the same H.O.T. (Helical Offset Tooth) design offering continuous rolling tooth engagement, ensuring a much quieter, synchronous drive with reduced vibration. A flangeless sprocket offering used with Eagle NRG also provides a reduced weight, more compact drive providing efficiencies up to 98%.

HIGHER HORSEPOWER RATING

With the emergence of higher horsepower requirements and the need to reduce the size of drives, Eagle NRG's increased horsepower capacity, up to 25% improvement, has the ability to handle an even wider variety of applications. Newly engineered materials and specialty compounds are formulated to give this next-generation Eagle belt more value in the most demanding applications.

IMPROVED OPERATING TEMPERATURE RANGE

Knowing that elevated temperatures can significantly reduce belt life, we have made improvements in Eagle NRG's ability to perform at 200°F continuous operation and withstand peak temperatures as high as 300°F.

With Eagle NRG, you can experience a whole new level of performance and value in reinforced rubber synchronous belts.

To learn more visit www.goodyearep.com/ptp.

BELT MATERIALS COMPOUNDED TO LAST LONGER

Durability starts with the Eagle NRG belt's rubber compound, a cross-linked elastomer formulated to resist tooth deformity and increase tooth rigidity. Eagle NRG is also chemically stable to resist the effects of oils, coolants, heat, and ozone.

Eagle NRG's high-strength Flexten tensile member provides optimal resistance to flex fatigue, elongation, and shock loads while operating at high torque conditions. The facing of Eagle NRG belts also reduce tooth engagement friction while standing up to oil and chemical permeation.

INCREASED EFFICIENCY DRIVE CHANGE OPPORTUNITY

The unique tooth configuration of Eagle NRG provides continuous tooth engagement and eliminates slippage. With a power efficiency rating of 98%, Eagle NRG can offer you an impressive 5% edge over typical V-belt drives.

Simply stated, with Eagle NRG, you get what you pay for with each energy dollar. This is especially true when the Eagle NRG is applied to high-energy consuming drives that are used 24 hours a day, as well as high horsepower drives that inflate energy consumption during peak periods.

A QUIETER, REDUCED VIBRATION DRIVE

The H.O.T. design of Eagle NRG belts and sprockets reduces vibration and decreases operating noise by as much as 19 decibels versus other synchronous systems. This can lead to a quieter working environment with improved worker efficiency. Costs associated with monitoring, training, and testing to meet OSHA regulations can be virtually eliminated with Eagle NRG drives.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

GOODYEAR ENGINEERED PRODUCTS

EAGLE NRG™

LOWER MAINTENANCE COSTS

Unlike chain drives, Eagle NRG belts and sprockets do not require lubrication. After initial run in and rechecking tension after 8 hours of operation, Eagle NRG belts do not need additional retensioning like V-belts and chain.

MATCHING BELT TO SPROCKET HAS NEVER BEEN EASIER

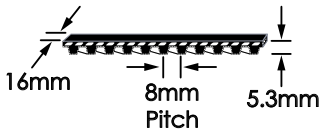
The Eagle NRG Color Spectrum System makes it the easiest power transmission drive to sell, purchase, and install.

The part numbering system for Eagle NRG centers around a color-coded sizing system for the belts and sprockets. Each belt and sprocket part number includes a letter corresponding to a color and is also branded in that color. The letters Y, W, P, B, G, O, and R indicate the colors Yellow, White, Purple, Blue, Green, Orange and Red. All Yellow belts are designed to function with all Yellow sprockets, as is the case for the White, Purple, Blue, Green, Orange and Red sizes. An example of the part numbering system nomenclature for belts, sprockets, and bushings follows and also appears on subsequent pages.

BELT PART NUMBER NOMENCLATURE

G – 2800
- G — Green Color
- 2800 — 2800 mm Pitch Length

Y – 896
- Y — Yellow Color
- 896 — 896 mm Pitch Length



EAGLE NRG YELLOW (8 mm Pitch – 16 mm Width)

Part Number	No. of Teeth	Length (in)	Part Number	No. of Teeth	Length (in)
Y-640	80	25.20	Y-1280	160	50.39
Y-720	90	28.35	Y-1440	180	56.69

GOODYEAR ENGINEERED PRODUCTS

NEW!

EAGLE NRG™ SPROCKETS

EAGLE NRG™

Color Spectrum System

MATCHING BELT TO SPROCKET HAS NEVER BEEN EASIER!

Part No: Y-28S-H

Y	Yellow = 8 mm Pitch, 16 mm Width
28	28 Teeth
S	Sprocket
H	Hub/Bushing Type

Applications

Eagle NRG belts and sprockets are ideal for use on a wide variety of applications in all industries.

Key Features & Benefits

- More design flexibility with more compact drives.
- No flanges.
- Self-tracking design.
- Available in ductile iron, aluminum, steel, or stainless steel.

Sprocket Combinations to Fit Your Drive System's Needs

Eagle NRG sprockets have been designed to insure maximum service life and performance. Over 1,500 sprocket combinations are available, making it easier to match the desired design speed. More speed ratio options also means more design flexibility and more compact drives.

Eagle NRG sprockets do not require flanges and are stocked in ductile iron constructions. Other materials such as aluminum, steel, and stainless steel are available upon request as made-to-order items.

Matching Belt to Sprocket Has Never Been Easier

The part numbering system for Eagle NRG centers around a color-coded sizing system for the belts and sprockets. Each belt and sprocket part number includes a letter corresponding to a color and is also branded in that color. The letters Y, W, P, B, G, O and R indicate the colors Yellow, White, Purple, Blue, Green, Orange, and Red. All Yellow belts are designed to function with all Yellow sprockets, as is the case for the White, Purple, Blue, Green, Orange, and Red sizes. An example of the part numbering system nomenclature for sprockets and bushings is given below.

Sprocket Part Number Nomenclature

Minimum Plain Bore, MPB: **O-40S-MPB**

This is an Orange size sprocket with 40 teeth and a Minimum Plain Bore (MPB) style hub. The MPB style sprockets are supplied with a minimum bore, typically ½″ or 1″ with H7 tolerances, and will require machining of a keyway and setscrew holes, and possibly boring to a desired bore size.

Quick Disconnect, QD: **R-168S-N**

This is a Red size sprocket with 168 teeth and a hub machined to fit an "N" size QD bushing. A bushing is required to install this sprocket on a shaft. Please note that smaller diameter sprockets are not available in the QD style due to space limitations.

Finished Stock Bore, FSB: **G-34S — 1⅞**

This is a Green size sprocket with 34 teeth and a Finished Stock Bore (FSB) style hub featuring a bore of 1 7/8". FSB sprockets are supplied ready to install with a standard keyway and setscrew holes machined.

Bored To Suit, BTS: **B-28S-BTS — 1 13⁄16**

This is a Blue size sprocket with 28 teeth and a hub that has been bored (BTS) to 1 13⁄16″, per customer specification, and machined for setscrew holes and a keyway. BTS sprockets can be made to almost any bore including metric sizes.

Note: All MPB-, QD-, and FSB-style sprockets are stock items. BTS sprockets are made to order and may require lead times.

Bushing Part Number Nomenclature

E 2⅛: **E** **Bushing Size**
2⅛ **Bushing Bore**

Bushings are supplied with bolts, lock washers, and set screws. Keys are supplied only if a special shallow key is required. The E 2⅛″ bushing can be used to install any sprocket with an "E" hub on a 2⅛″ shaft. The QD bushing system is an industry standard, however, to ensure the best match between sprocket and bushing, we recommend using bushings supplied by Veyance for Eagle NRG sprockets.

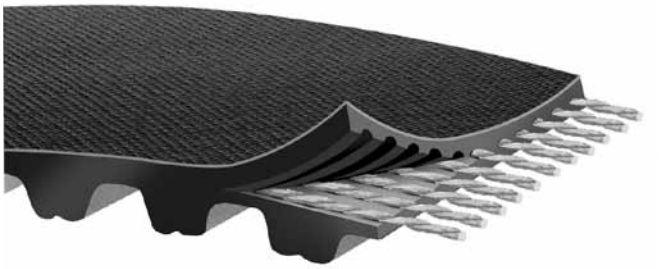
FALCON HTC®

NEW!



Part No: 8GTR-640-12

8	8mm Pitch Length
GTR	Falcon HTC Belt
640	640mm Pitch
12	12mm Width

THE STAR OF OUR REINFORCED RUBBER POWER TRANSMISSION BELT PORTFOLIO

Falcon HTC is quickly setting the new standard in synchronous drive system belting. When compared to conventional polyurethane synchronous belts, the benefits of Falcon HTC become evident.

SPECIALTY COMPOUNDED MATERIALS GIVE THIS BELT SUPERIOR ADVANTAGES

A reinforced-rubber synchronous belt designed to work in a variety of demanding drives, Falcon HTC now offers up to 30 percent more horsepower over its predecessor. The ability to operate continuously in temperatures up to 200°F, along with being static conductive, helps Falcon HTC perform in special applications, providing longer life and higher output to meet your needs.

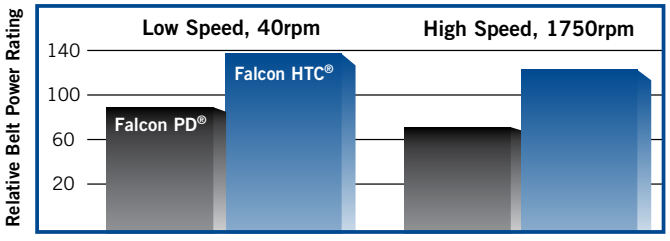
LOWER MAINTENANCE COSTS REDUCE THE PAIN

Falcon HTC synchronous belts do not require lubrication often found in chain drive applications. High-modulus cord members minimize the need for retensioning normally required in standard v-belts, reducing your overall maintenance cost.

QUIET OPERATION

Falcon HTC runs quieter, up to 6dB in operation for a better environment while offering advanced flex-fatigue resistance to help extend belt life.

POWER RATING COMPARISON



Conditions: 14mm Pitch Belt, 20mm Width Belt, 32 Tooth Sprockets

APPLICATIONS

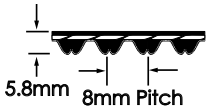
Any application where a chain drive could be used.

Can also be used with a backside idler when needed, allowing for additional applications.

Suitable for high horsepower, low torque drives.

KEY FEATURES & BENEFITS

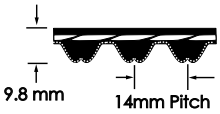
- Increased Horsepower Rating up to 30%
- Increased Continuous Operating Temperature up to 200°F
- Static Conductive**
- Size for size convenience. Example: 8GTR-640-21 = Gates 8MGT-640-21*
- Reduced operating noise levels to comparable belt drives.
- Exceptional tensile strength for premium performance.
- Rubber construction provides better resistance to flex fatigue.
- Versatility in a wide range of operating temperatures.



8 M (8mm Pitch)

Pitch Length (mm	Pitch Length (mm)	Pitch Length (mm)
640	1280	2520
720	1440	2840
800	1600	3200
896	1792	3600
1000	2000	4000
1120	2240	4480
1200	2400	

Stock Widths: 12mm, 21mm, 36mm, 62mm



14 M (14 mm Pitch)

Pitch Length (mm	Pitch Length (mm)	Pitch Length (mm)
994	1890	2800
1120	1960	3136
1190	2100	3304
1260	2240	3500
1400	2380	3920
1568	2520	4410
1750	2660	

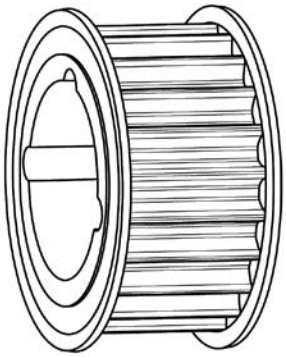
Stock Widths: 20mm, 37mm, 68mm, 90mm, 125mm

* Gates, Poly Chain and GT are trademarks of the Gates Corporation.

**Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

NEW!

FALCON HTC® SPROCKETS



Part No: GTR-22G-8M-12

GTR	Falcon HTC Sprocket
22G	22 Grooves/Teeth
8M	8 mm Pitch Length
12	12 mm Width

APPLICATIONS

Any applications where a chain drive could be used or there is a need for a high-efficiency drive system.

For use where Falcon HTC belts are specified or desired.

System is backside idler compatible allowing for additional applications.

KEY FEATURES & BENEFITS

- Goodyear Engineered Products GTR-22G-8M-12 replaces 8MX-22S-12
- Convenient replacement for existing Poly Chain® GT® 2 and Poly Chain GT Carbon®* drives
- Cast iron or steel construction
- Stock on most popular application sizes. Other sizes available as special order.

COMPACT DRIVES WITH HIGH PERFORMANCE

Falcon HTC sprockets are designed to be a part of a complete high performance drive system. Working with our premium synchronous Falcon HTC belts allows for a lot of performance in a small space, giving you flexibility in design and application.

Falcon HTC belts and sprockets are ideal for use on a wide variety of applications and industries.

MATCHING BELT TO SPROCKET IS SIMPLE

The part numbering system for Falcon HTC sprockets is simple and easy. Just match the belt's width and pitch length to that of the sprocket and select the preferred number of grooves/teeth to provide the desired performance characteristics. Refer to the part number example above for a part number breakdown.

GET WHAT YOU PAY FOR DRIVE CHANGE

With Falcon HTC belts and sprockets, you get more of what you pay for with each energy dollar. This is especially true when Falcon HTC is applied to high-energy consuming drives that are used 24 hours a day, as well as high horsepower drives that inflate energy consumption during peak periods.

QUIETER, MORE FLEXIBLE DRIVE SYSTEM

Falcon HTC belt and sprocket systems also offer a decrease in operating noise. Tests show up to 6dB quieter operation than comparable Poly Chain GT 2 and Poly Chain GT Carbon* belt systems.

Proprietary rubber construction provides better resistance to flex fatigue and versatility in a wide range of operating temperatures.

A SYSTEM THAT WORKS WITH LESS MAINTENANCE

Since Falcon HTC belts are made of our proprietary high-grade rubber compound, you get a solution that can handle very demanding synchronous drive systems. Falcon HTC does not require lubrication. There is also no need for retensioning after the initial run in period like V-belts drives. Install a Falcon HTC drive system and watch your maintenance costs drop.

* Gates, Poly Chain and GT are trademarks of the Gates Corporation.

GOODYEAR ENGINEERED PRODUCTS

HAWK Pd®

Part No: 480-8M-20
480 480mm Pitch Length
8M 8mm Pitch
20 20mm Wide

A HIGH-PERFORMANCE SYNCHRONOUS BELT WITH A UNIVERSAL PROFILE

With its universal tooth profile, Hawk Pd is precisely designed and manufactured to fit the majority of existing high-capacity synchronous applications. Hawk Pd can fulfill most existing drive requirements in its class matching competitive offerings of belt width and length.

Sprocket compatibility with Gates HTD*, Power Grip GT and GT 2*, Carlisle RPP and RPP Plus*, and TB Wood's Synchronous QD*. Industry-compatible nomenclature for easy part number interchange.

BELT MATERIALS THAT LAST LONGER

Hawk Pd belts feature an enhanced rubber compound. This compound is formulated to resist tooth deformity and increase tooth rigidity, increasing belt life and decreasing replacement costs.

The demands of synchronous drives put additional strain on the belt and tooth surface for high-speed and low-speed applications. The Hawk Pd tooth profile resists ratcheting and provides accurate positioning for synchronous drive applications. Enhanced Goodyear Engineered Products materials and tooth profile enable the teeth to engage the sprocket smoothly.

*Trademarks of the Gates Corporation, Carlisle, and TB Wood's Incorporated respectively.

APPLICATIONS

Nearly every conceivable industrial drive application where shaft synchronization is required. Hawk Pd belts can also be used as an alternative to problem V-belt and chain drives.

- Aggregate Machinery
- Paper Industry Machinery
- Printing Trade Machinery
- Food Processing Equipment
- Packaging Machinery
- Mining Equipment
- Woodworking Machinery
- Office Equipment
- Machine Tool
- Home Appliances
- HVAC Units
- Textile Machinery
- Farm Machinery
- Vending Machines

KEY FEATURES & BENEFITS

- Universal tooth profile drops into existing HTD, GT and RPP sprockets. Industry-compatible nomenclature.
- High-grade compounding.
- Requires little, if any, retensioning and less drive maintenance.
- Oil, heat, ozone, and abrasion resistant.
- Designed for high-capacity performance.
- Higher horsepower rating than traditional timing belts.

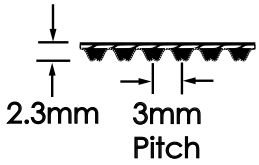
HIGH CAPACITY PERFORMANCE

Hawk Pd synchronous belts are designed for high-capacity performance, exceeding the traditional speed limitations of chain and performance limitations of belt drives. The new material technology delivers a higher horsepower rating and improved life.

LOWER MAINTENANCE COSTS

Unlike chain drives, Hawk Pd belts and matching sprockets do not require lubrication. There is also virtually no need for retensioning like there is for V-belts and chain drives. Install Hawk Pd and reduce your maintenance costs.

HAWK HD®



3 M Available Sizes

Pitch Length (mm)	Pitch Length (mm)
159*	612*
204*	633*
252*	675*
264*	738*
312*	

*Nonstock, made to order. Minimum quantities required.

Pitch Length (mm)	Pitch Length (mm)	Pitch Length (mm)
2000	4200	5400
2500	4600	5800
3400	5000	6200
3800	5200	6600

Stock Widths: 115mm, 170mm, 230mm, 290mm, 340mm

*Static conductive

In addition to our stock lineup of synchronous belts, we can manufacture additional sizes (lengths) not listed.

For full product availability and specifications, please visit www.goodyearep.com/ptp or contact a Goodyear Engineered Products sales representative.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

BLACKHAWK Pd®

Part No: 480 8M BH 12
480 480mm Pitch Length
8M 8mm Pitch
BH Blackhawk Belt
12 12mm Wide

A HIGH-PERFORMANCE SYNCHRONOUS BELT WITH A UNIVERSAL PROFILE

For a curvilinear belt that offers improved performance in your synchronous application, look no further than Blackhawk Pd. The high-performance belt offers best-of-breed technology and higher horsepower for the money. Its proven durability and strength makes it a compatible upgrade for many other timing belts.

BELT MATERIALS THAT LAST LONGER

Blackhawk Pd belts feature a patented high-grade rubber compound. This cross-linked elastomer is formulated to resist tooth deformity and increase tooth rigidity, increasing belt life and decreasing replacement costs.

Blackhawk Pd's Flexten® tensile members provide excellent dimensional stability and high impact strength. Blackhawk Pd requires virtually no retensioning and minimum maintenance.

The demands of synchronous drives put additional strain on the belt and tooth surface for high-speed and low-speed applications. The Blackhawk Pd tooth profile resists ratcheting and provides accurate positioning for synchronous drive applications.

HIGH CAPACITY PERFORMANCE

Blackhawk Pd synchronous belts are designed for high-capacity performance, exceeding the traditional speed limitations of chain and performance limitations of belt drives. Blackhawk Pd belts are able to perform in drives ranging from fractional horsepower to 400 horsepower. The new material technology delivers a higher horsepower rating.

APPLICATIONS

Nearly every conceivable industrial drive application where precise shaft synchronization is required. Blackhawk Pd belts can also be used as an alternative to problem V-belt and chain drives.

- Aggregate Machinery
- Paper Industry Machinery
- Printing Trade Machinery
- Food Processing Equipment
- Packaging Machinery
- Mining Equipment
- Woodworking Machinery
- Office Equipment
- Machine Tool
- Home Appliances
- HVAC Units
- Textile Machinery
- Farm Machinery
- Vending Machines

KEY FEATURES & BENEFITS

- Universal tooth profile drops into existing HTD and RPP sprockets.
- High-grade Hibrex compound.
- Flexten tensile members provide excellent dimensional stability and high-impact strength.
- Requires little, if any, retensioning and less drive maintenance.
- Oil, heat, ozone, and abrasion resistant.
- Designed for high-capacity performance.
- Higher horsepower rating than traditional timing belts.
- Static conductive*

LOWER MAINTENANCE COSTS

Unlike chain drives, Blackhawk Pd belts and matching sprockets do not require lubrication. There is virtually no need for retensioning like there is for V-belt and chain drives. Install Blackhawk Pd and watch your maintenance costs drop to practically nothing.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

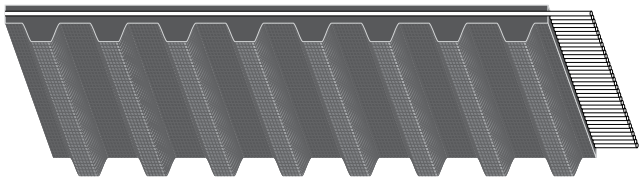
POSITIVE DRIVE Pd®



Part No: 100 XL 025

100	10.0″ Pitch Length
XL	Pitch-Trapezoidal Tooth Profile
025	.25″ Wide

SPEED, ACCURACY & DEPENDABILITY FOR PRECISION-ENGINEERED DRIVES

Goodyear Engineered Products Positive Drive belts give you the opportunity to design your drives for the speed, accuracy, and dependability consistent with the best synchronous belt drives, all without the bulk, weight, and added cost that is inherent in chain and gear power transmission systems.

Goodyear Engineered Products Pd belts have precision-molded teeth to deliver the synchronized power you need. Because they're made of specially compounded rubber, reinforced with high-strength, stable fiberglass tensile cord members, and have a long-wearing nylon facing, they are durable and provide a smooth, precise operation.

ENGINEERED FOR FULL-POWER TRANSMISSION, SMOOTH OPERATION

Our Positive Drive belts are made with world-class rubber technology which is specifically compounded to resist damaging environmental factors that can shorten belt life. Our specialized compound technology has excellent oil, heat, and ozone resistance, increasing durability and preserving belt flexibility leading to extended belt life.

AVAILABLE IN A VARIETY OF PITCHES

Goodyear Engineered Products Pd belts are available in a variety of pitches depending on the application.

APPLICATIONS

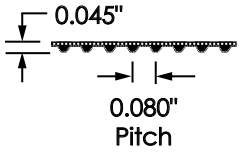
Nearly every conceivable industrial drive application where precise shaft synchronization is required. Positive Drive belts can also be used as an alternative to problem V-belt and chain drives.

- Aggregate Machinery
- Chain Drives
- Packaging Machinery
- Paper Industry Machinery
- Food Processing Equipment
- Printing Trade Machinery
- Woodworking Machinery
- Office Equipment
- Machine Tools
- Farm Machinery
- Home Appliances
- Textile Machinery
- Mining Equipment

KEY FEATURES & BENEFITS

- Universal trapezoidal tooth profiles drop into existing sprockets.
- High-grade compounding.
- Fiberglass tension cords for excellent resistance to shrinkage/elongation.
- Oil, heat, ozone, and abrasion resistant.
- Low-maintenance/high-efficiency rating.

POSITIVE DRIVE Pd®

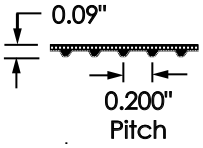


MXL (Mini Extra Light)

For small business machines, office equipment, electric equipment, etc.

13/16″ Pitch Standard Part Numbers		
40MXL	72MXL	112MXL
44MXL	80MXL	120MXL
48MXL	88MXL	140MXL
64MXL	96MXL	168MXL

Stock Widths* 1/8 inch = 012
3/16 inch = 019
1/4 inch = 025

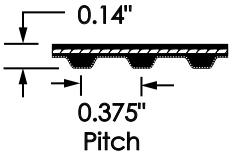


XL (Extra Light)

For business machines, instruments, sound equipment, etc.

1/5″ Pitch Standard Part Numbers		
50XL	190XL	350XL
60XL	200XL	370XL
70XL	210XL	380XL
80XL	220XL	390XL
90XL	230XL	400XL
100XL	240XL	420XL
110XL	250XL	450XL
120XL	260XL	460XL
130XL	280XL	480XL
140XL	290XL	500XL
150XL	300XL	570XL
160XL	310XL	630XL
170XL	330XL	770XL
180XL	340XL	

Stock Widths* 1/4 inch = 025
3/8 inch = 037

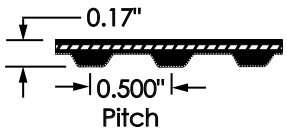


L (Light)

For fraction power-rated motor applications such as in-home appliances, small tools, pumps, blowers, etc.

3/8″ Pitch Standard Part Numbers		
124L	255L	450L
135L	270L	480L
150L	285L	510L
165L	300L	540L
187L	322L	600L
195L	345L	660L
210L	367L	817L
225L	390L	900L
240L	420L	

Stock Widths* 1/2 inch = 050
3/4 inch = 075
1 inch = 100

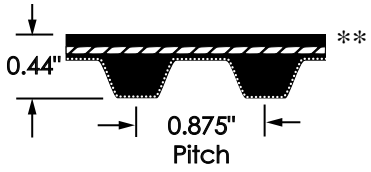


H (Heavy)

For machine tools, pumps, fans, presses, motor generator sets, etc.

1/2″ Pitch Standard Part Numbers		
210H	450H	730H
220H	480H	750H
230H	490H	780H
240H	510H	800H
270H	540H	820H
300H	560H	850H
320H	570H	900H
330H	585H	960H
360H	600H	1000H
390H	630H	1100H
400H	645H	1250H
410H	660H	1400H
420H	700H	1700H

Stock Widths* 3/4 inch = 075
1 inch = 100
1 1/2 inch = 150
2 inches = 200
3 inches = 300

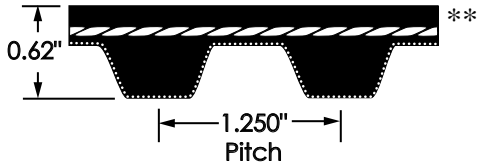


XH (Extra Heavy)

For medium torque applications on heavy industrial equipment.

7/8″ Pitch Standard Part Numbers		
507XH	770XH	1260XH
560XH	840XH	1400XH
630XH	980XH	1540XH
700XH	1120XH	1750XH

Stock Widths* 2 inches = 200
3 inches = 300
4 inches = 400



XXH (Double Extra Heavy)

For high torque applications on heavy industrial equipment.

1 1/4″ Pitch Standard Part Numbers		
700XXH	1000XXH	1600XXH
800XXH	1200XXH	1800XXH
900XXH	1400XXH	

Stock Widths* 2 inches = 200
3 inches = 300
4 inches = 400
5 inches = 500

13.00″ wide Pd sleeves are available from stock in XL, L, H, XH and XXH profiles. Please consult your PTP List Prices Pages publications for the full range of sizes.

*Stock Widths: Use the three-digit size number as a suffix to the belt number when ordering.
Note: For nonstock sizes, contact your local Goodyear Engineered Products PTP industrial distributor.

**Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

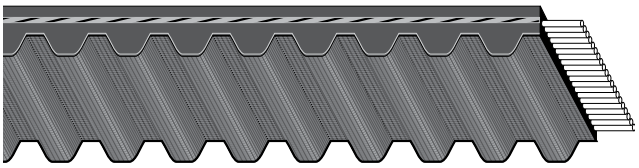
SUPER TORQUE Pd®



Part No: 100S4.5M175

100	10mm Width
S	Super Torque Positive Drive Belt
4.5M	4.5mm Pitch – Modified Round Tooth Profile
175	175mm Pitch Length

BUILT FOR STRENGTH & ENDURANCE

Super Torque Pd belts are designed for high-capacity performance. They are also made of the highest quality materials.

The tensile members are made from high-strength, stable fiberglass. They have excellent flex life and are resistant to elongation. The backing is made of our proprietary compound technology that is highly heat-resistant and shear-resistant. And the nylon facing is fabricated to provide low friction interface between belt and sprocket.

A DIFFERENT POSITIVE DRIVE TOOTH DESIGN

Goodyear Engineered Products Super Torque Pd belt tooth carries some significant advantages over competitive synchronous belts. You can run your finger along the bottom of the tooth and feel the flat surface. When the belt engages the uniquely designed pulley profile, forces are distributed throughout the entire belt tooth to disperse critical stresses over more area, resulting in reduced tooth shear and longer life.

The pulley for our Super Torque Pd belt has an arch in the bottom of the grooves that projects up to support the belt tooth. This support from the pulley is the key dynamic feature to increased belt capabilities. Together, the pulley and tooth of the Super Torque Pd belt extend the possibilities at both ends of the design spectrum.

All Super Torque Pd belts are nonstock. Standard factory lead times will apply. Minimums apply. Contact your local Goodyear Engineered Products PTP industrial distributor.

APPLICATIONS

Nearly every conceivable industrial drive application where precise shaft synchronization is required. Super Torque Pd belts can also be used as an alternative to problem V-belt and chain drives.

- Milling Machines
- Engine Accessory Drives
- Internal Combustion Engines
- Timers or Controllers
- Compressors
- Wood Chippers
- Conveyors
- Debarkers
- Lathes
- Shapers
- Textile Machinery
- Mixers

KEY FEATURES & BENEFITS

- Unique tooth profile for quiet tooth engagement.
- Improved horsepower capacity over standard HTD profiles.
- High-grade compound.
- Fiberglass tension cords for excellent resistance to shrinkage/elongation.
- Oil, heat, ozone, and abrasion resistant.
- Mating sprockets required.
- Low-maintenance/high-efficiency rating.

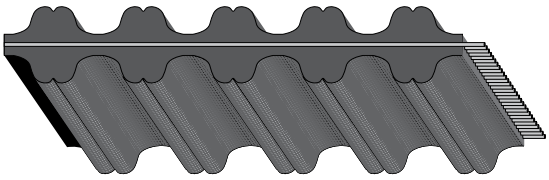
*Static conductive

Note: All Super Torque Pd belts are nonstock. Standard factory lead times will apply. Mandrel quantity minimums apply. Other sizes available upon request.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

GOODYEAR ENGINEERED PRODUCTS

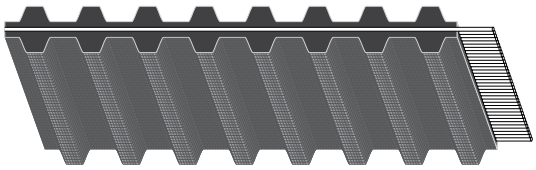
Dual Hi-Performance Pd® & Dual Positive Drive



Dual Hi-Performance Pd

Part No: D10408M20

D	Dual Sided
1040	1040 mm Pitch Length
8M	8mm Pitch – Round Tooth Profile
20	20mm Wide



Dual Positive Drive

Part No: D225L050

D	Dual Sided
225	22.5″ Pitch Length
L	L Pitch – Trapezoidal Tooth Profile
050	.50″ Wide

Applications

For precision drives where synchronized reverse rotation drive shafts are encountered and compactness is desired.

Key Features & Benefits

- Dual-sided teeth versatility in 8M, 14M, XL, L, and H profiles.
- High-grade compounding.
- Fiberglass tension cords for excellent resistance to shrinkage/elongation.
- More compact drive designs.
- Oil, heat, ozone, and abrasion resistant.

Improved Efficiency With Dual Synchronous Belts

Goodyear Engineered Products dual synchronous belts have precision teeth on both sides. This allows the design of more sophisticated, more efficient, and more compact drives where a single belt is needed to provide accurate timing from either side, rotation direction changes, or both.

Since a Dual Hi-Performance Pd or Dual Positive Drive belt can replace two or more single-sided synchronous belts, less space is needed. This reduction in space means smaller sprockets can be used, bringing the weight and component cost of the drive system down considerably, contributing to a more efficient drive system.

Dual Hi-Performance Pd Belts— 8M & 14M Profiles

Dual Hi-Performance Pd belts, with their unique round tooth profile, drop into corresponding HTD sprockets. They were designed to minimize interference between belt and sprocket during mesh, providing greater horsepower capacity without slippage or speed variation. By designing the tooth to disperse critical stresses and create a positive engagement with the sprocket, belt performance is improved along with assuring longer belt life.

Dual Positive Drive Belts— XL, L, & H Profiles

Goodyear Engineered Products Dual Positive Drive belts drop into existing trapezoidal profiled sprockets.

High-Strength Tension Cords

The tension-carrying member in Dual HPPD and Dual Positive Drive belts is twisted from multiple strands of fiberglass cord which are high in tensile strength, flex life, and resistance to elongation.

Advanced Compound Technology For Long Life

Our dual synchronous belts are made with specialized compound technology designed to resist damaging environmental factors that can shorten belt life. This compound technology has excellent oil, heat, ozone, and abrasion resistance, increasing durability and preserving belt flexibility leading to extended belt life.

XL Pitch-Trapezoidal Tooth
075 0.75″ Wide

Your Choice for Speed, Accuracy & Dependability

In power transmission or synchronization applications such as conveying, linear motion, or positioning, Goodyear Engineered Products Open End Pd belts are the economical and trouble-free drive solution.

Economy is derived from the Open End Pd belt's reduced bulk weight and lower costs compared to chain drives. Precision-molded teeth efficiently deliver the required power while running smoother and quieter than chain drives. They require less maintenance, as well as provide more design options.

Goodyear Engineered Products Open End Pd belts are available in Hawk Pd®, Falcon HTC®, Positive Drive Pd®, Super Torque Pd® and Metric T Pd® constructions. Regardless of the application, the entire product line is designed to provide increased belt life, reduced overall costs, and lower noise generation. In short, Open End Pd synchronous belts give you the power to drive your designs better than ever.

Applications

For synchronized applications.

- Elevation Mechanisms
- Linear Motion Drives
- Open/Close Mechanisms
- Reciprocating Drives
- Replaces Chain Applications
- Synchronized Tracking
- Positioning Drives
- Metering Drives
- Conveying Drives
- Reversing Drives
- Fixed Center Drives

Key Features & Benefits

- Wide load range available from various cross sections.
- High power-to-weight ratio allows for lighter metallic or nonmetallic pulleys for greater weight savings.
- Provides space-saving design opportunities using small pulleys, short centers, and narrow belts.
- Smooth engagement of belt and pulley eliminates chatter and vibration.
- Low noise improves aesthetic acceptance of equipment.
- Requires no lubrication or retensioning.

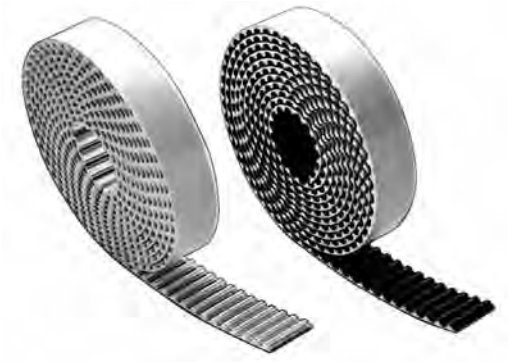
GOODYEAR ENGINEERED PRODUCTS

POLYURETHANE BELTS

ELATECH* DISTRIBUTED BY VEYANCE TECHNOLOGIES



APPLICATIONS

Polyurethane belts can be used in open end, jointed/spliced, or truly endless configurations in a variety of applications.

Typical applications for the open end configuration are in linear motion devices and other drives where precise motion is required.

Typical application for the spliced configuration are in light conveyors and other material process and transfer industries.

Truly endless due to having no splice or welding, are ideal in high load conveying or power transmission applications.

KEY FEATURES & BENEFITS

- Polyurethane material resists flaking, has higher dimensional stability, and has superior wear and abrasion resistance.
- Higher flexibility

BELTING FOR A WIDE VARIETY OF APPLICATIONS

ELATECH distributed by Veyance Technologies is a full line of polyurethane belting covering a full range of applications – linear motion, and conveying and power transmission.

ELATECH's Polyurethane belts are a combination of a polyurethane body reinforced with special steel or aramid tension members to fulfill the most severe industrial requirements.

Available product styles include:

ELATECH M – Open End
ELATECH V – Jointed
ELA-flex SD – Truly Endless
iSync – TrulyEndless Sleeves

WIDE RANGE OF BACKINGS AND CLEAT ATTACHMENTS

The unique chemical and mechanical characteristics of polyurethane belts along with the possibility of a variety of backings are ideal for conveying applications.

It is possible to attach a variety of cleats on all of ELATECH's polyurethane belts for conveying, handling, and positioning.

BELT CONSTRUCTION ENGINEERED FOR EXCELLENCE

ELATECH belts are manufactured with a body of thermoplastic polyurethane providing superior wear and abrasion resistance. It can be an ideal choice where cleanliness is critical. The precise manufacturing process, coupled with the polyurethane belt material, ensures a reliable and dimensionally stable product.

The tension members are high tensile steel that offer excellent dimensional stability for accurate positioning and less maintenance. Construction with special cords is available upon request.

A special polyamide fabric on the tooth facing (special order) can reduce friction, improve tooth engagement, and reduce noise.

BUILT FOR EXTREME CONDITIONS

The chemical properties of polyurethane belting make them highly resistant to:

- Hydrolysis
- Ozone
- UVA
- Aging
- Oils, greases and fats
- Gasoline
- Good resistance to acids

ELATECH's product line has a working temperature range of 15°F. to 175°F (peaks up to 230°F).

MORE INFORMATION

Full product offering, technical data, and drive data can be obtained in the ELATECH Polyurethane Belts catalog.

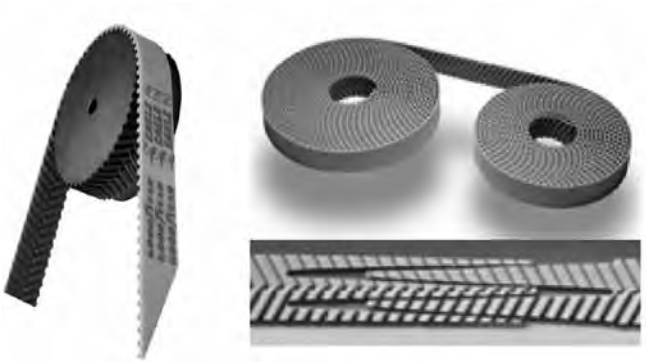
EAGLE Pd® ACCULINEAR®



Part No: Y-8-PU-16-STD

Y	Alphabetical designation denotes belt width (Y=16 mm Wide Belt)
8	8 mm Belt Pitch
PU	Polyurethane
16	Belt Width (16 mm)
STD	Standard Construction

APPLICATIONS

Eagle Pd Acculinear belts can be used in open-end or spliced configurations in a variety of applications.

Typical applications for the open-end configuration are in linear motion devices and other drives where precise motion is required.

Typical application for the spliced configuration are in light conveyors and other material processing and transfer industries.

KEY FEATURES & BENEFITS

- Polyurethane material resists flaking, has higher dimensional stability, and has superior wear and abrasion resistance.
- Self-tracking and compact drives.
- Less vibration and reduced noise.
- High flexibility.
- High-Precision linear positioning.

THE BENEFITS OF EAGLE SYNCHRONOUS BELTS... NOW IN POLYURETHANE MATERIAL

Eagle Pd Acculinear combines the advantages of polyurethane with the unique H.O.T. (Helical Offset Tooth) geometry for a low-maintenance belt that resists wear. Polyurethane belts resist flaking, offer high resistance to oils, fats and greases, and are more abrasion-resistant than rubber products. With high flexibility and long life, Eagle Pd Acculinear is a revolutionary choice for a wide range of applications.

SELF-TRACKING SPROCKET

When it comes to performance, Eagle Pd Acculinear belts and sprockets are right on track. The key to success lies in the system's patented H.O.T. geometry. With this self-tracking configuration, the sprocket's left and right helixes guide the thermoplastic polyurethane belt to the center of the Eagle Pd Acculinear sprocket. And there it remains: no waste, no wander, just improved efficiency and wear resistance in a compact design. The H.O.T. geometry eliminates belt wander and the need for flanges. As a result, Eagle Pd Acculinear sprockets can be used on slider bed applications where flanges would normally protrude above the bed surface.

LOW VIBRATION

Eagle Pd Acculinear and the H.O.T. design minimize belt vibration on flat pulleys used on the entry and exit of slider beds. The belt moves progressively over straight edges, reducing noise and vibration.

The tooth geometry eliminates the chordal effect that occurs around the tooth sprocket and reduces drive vibration.

H.O.T. GEOMETRY DELIVERS QUIETER DRIVE

This innovative polyurethane belt and sprocket system uses our proprietary technology to deliver noise levels far below the industry standard. The unique design of Eagle Pd Acculinear belts and sprockets is the reason for the system's superior noise reduction. The self-tracking belt is guided to the center of the sprocket—delivery that smooths out tooth engagement unlike any other tooth geometry.

BELT CONSTRUCTIONS ENGINEERED FOR EXCELLENCE

The tooth and backing material are made of thermoplastic polyurethane, which provides superior wear and abrasion resistance. It's an ideal choice in applications where cleanliness is critical. The precise manufacturing process, coupled with the polyurethane belt material, ensures a reliable and dimensionally stable product.

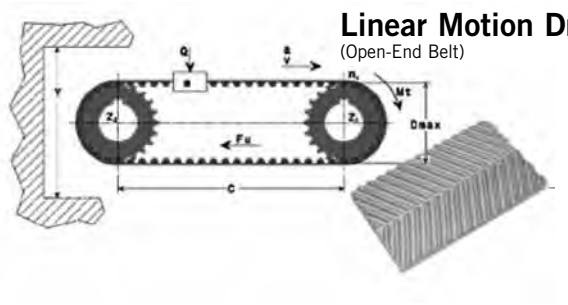
The tension members are high tensile steel and offer excellent dimensional stability for accurate positioning and less maintenance.

The tooth facing offers reduced coefficient of friction with the sprocket and also provides wear and abrasion protection.

EAGLE Pd® ACCULINEAR®

OPEN-END BELT CONFIGURATION

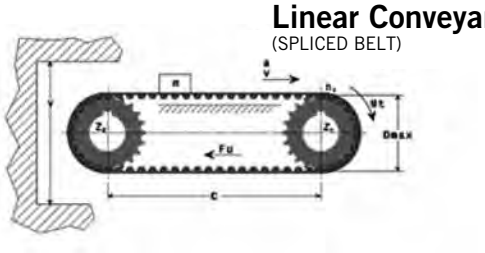
Eagle Pd Acculinear belts are manufactured in open-end rolls with a standard roll length of 300 feet. The belt is manufactured with the tension members lying parallel to the belt edge so that the load is equally distributed across all tension members. A common application of open-end belts is in linear motion drives. Clamping plates are available for open-end Eagle Pd Acculinear belts to mechanically join the belt's ends.



Linear Motion Drive
(Open-End Belt)

SPLICED BELT CONFIGURATION

Lengths of open-end Eagle Pd Acculinear can also be thermetically spliced to obtain any continuous length of endless belting. These spliced Eagle Pd Acculinear belts are primarily used in light conveyor applications, where long endless belts are required.



Linear Conveyance Application
(SPLICED BELT)

SPROCKETS

Eagle Pd Acculinear Sprockets for the polyurethane belt line are available for all eight belt widths in a wide range of diameters.

The Eagle Pd Acculinear product shares the same sprockets as the rubber Eagle Pd® product. The only exception is with the "M" (25mm width) and the "L" (50mm width) sprockets. These two widths are stocked in aluminum and are offered in a limited size range. All other sprocket widths are stocked either in ductile or cast iron. Refer to the "Eagle Pd Acculinear Sprocket" section for more information.

SPECIAL BELT CONSTRUCTIONS

In addition to the standard belt construction (polyurethane backing material), Eagle Pd Acculinear is available in a variety of special constructions. Several materials can be applied to the back of the belt to enhance its performance in specific drive environments. These backing materials are typically used when special characteristics are required on the back of the belt to transfer specific materials in conveyor applications.

A number of special backings are available on request. Refer to the appropriate engineering manual or to the Web site for more information on these special backings.

Eagle Pd Acculinear is available in 8 standard widths
(in 8 and 14 mm pitch configurations)

**These sprocket sizes are nonstock items.

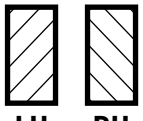
Notes:

1. Al = Aluminum (uncoated).
2. Sprockets are only available in MPB.
3. The "L"(50mm width) and "M" (25mm width) belts are nonstock items which need to be quoted and may have a longer lead time.
4. Sprocket dimensions and material are subject to change.
5. Please contact your Goodyear Engineered Products PTP industrial distributor for sprocket sizes and materials not listed in this manual or visit goodyearep.com to locate one.



LH is the left-hand helix.
RH is the right-hand helix.
Note: For proper installation, orientation of teeth must be in the same direction on all sprockets in the drive.

8:	R-14-PU-105	18	130	200	AL	

AL = Aluminum

BANDED BELTS

Because of their banded or joined construction, these belts tend to prevent rollover and reduce vibration tendencies. Banded belts are usually better suited to unusual drive situations than are matched belt sets. They are available in the classical cross sections (A, B, C, & D), narrow cross sections (3V, 5V, & 8V), and Poly-V® cross sections (H, J, L, & M).

CLASSICAL & NARROW BANDED V-BELTS

Typical applications for banded V-belts include vertical shaft drives, clutching drives, and V-flat drives. (V-belt drives are where the inside of the belt drives a flat pulley on the slower speed shaft.)

Banded V-belts are recommended for use where belt vibration or belt whip causes unsatisfactory results when conventional multiple single V-belts are used. Such situations are not uncommon on drives with a combination of long belt spans and/or pulsating loads as created by an internal combustion engine or reciprocating pumps and compressors. In such cases, belt whip may become so severe that belts interface with each other and turn over in the grooves or even jump out of the grooves. Banded V-belts eliminate such problems.

Another advantage of banded V-belts is the considerable degree of design flexibility they can provide since they operate just as effectively when they, in turn, are used as match sets. A two-belt unit for example, has sufficient lateral rigidity so as to not interface with the units in adjacent grooves.

TORQUE TEAM PLUS® (FLEXTEN®-REINFORCED BANDED V-BELTS)

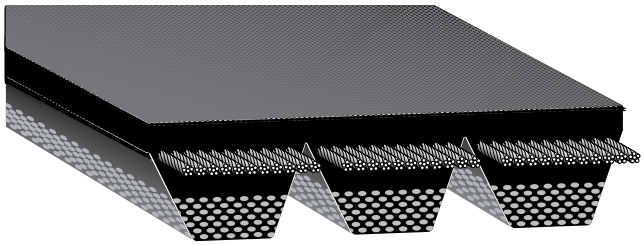
These belts are available for low-speed, high-power applications which were previously considered to be in the domain of chain or gears. Flexten-reinforced Torque Team Plus 5V and 8V banded belts are ideally suited to handle many of the applications that have been reserved for chain or gears.

POLY-V (V-RIBBED)

Poly-V belts are flat belts with a series of longitudinal ribs on the driving face that mate with grooves in the sheave rim. Relatively thin, with a well-supported tensile member, these belts perform better than V-belts on drives with small sheave, high speeds, reverse bends, and high-speed ratios. Poly-V belts generally run smoother than V-belts, and their low weight makes them suitable for high-speed drives.

Three cross sections, designated J, L, and M, handle the same range of industrial applications as narrow or classical belts. A smaller section, H, is used for small sheave and miniature drives. Finally, the K section Poly-V is often located in the Automotive industry.

TORQUE TEAM® (LAMINATED)



Part No: 3/5VL800

3/	3 Rib Joined Construction
5V	0.62″ Top Width – Narrow Profile Rib
L	Laminated Construction
800	80.0″ Nominal Outside Length

SOLVE THE TOUGHEST SAWMILL DRIVE PROBLEMS

Goodyear Engineered Products Torque Team Laminated V-belts are particularly effective when installed on drives that experience frequent slippage caused by logs and heavy lumber that jam or impact the equipment.

REDUCE DOWNTIME & MAINTENANCE

Goodyear Engineered Products Torque Team Laminated V-belts can withstand the punishment that results from jams in log and lumber processing applications.

Standard V-belts resist slipping when a jam occurs, causing excessive heat buildup that can lead to belt failure and costly downtime. But that won't happen with Torque Team Laminated V-belts on the job.

The special sidewall of Torque Team Laminated V-belts acts as a control switch, allowing the belts to slip as needed until the obstruction is cleared. As a result, the superior wear-resistant capabilities of Torque Team Laminated V-belts are maintained, increasing belt life up to four times longer than standard V-belts.

HIGH STRENGTH FOR LONG LIFE

Goodyear Engineered Products Torque Team Laminated V-belts feature our powerful Vytacord® tensile members. Vytacord provides high strength and horsepower ratings, yet serves as a more forgiving reinforcement that will give under excessive tension instead of snapping. That means increased belt life.

Sizes		
5VL800	5VL1000	5VL1250
5VL850	5VL1060	5VL1320
5VL900	5VL1120	5VL1700
5VL950	5VL1180	

APPLICATIONS

Some of the most common drives recommended for consideration include:

- Debarkers
- Chip-n-Saws
- Cut-Off Saws
- Chippers
- Gang Saws
- Deck Saws
- Trimmers

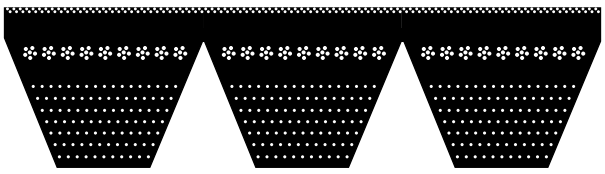
KEY FEATURES & BENEFITS

- Narrow profile ribs provide savings through efficiency.
- Joined construction for problem drives.
- High horsepower capacity.
- High-strength Vytacord tensile members.
- Laminated construction engineered to slip.
- Tough fabric backing.
- Oil, heat, ozone, and abrasion resistant.
- Static conductive.*

AVAILABLE IN A WIDE VARIETY OF SIZES

Goodyear Engineered Products Torque Team Laminated V-belts are available in the 5VL belt cross section and in most standard lengths. The 5VL laminated V-belt is interchangeable with all standard 5V and 5VX V-belts currently found on these drives. They can also be cut to a variety of rib widths, depending on your drive requirements. This ensures a perfectly-matched set of V-belts that can further enhance drive performance.

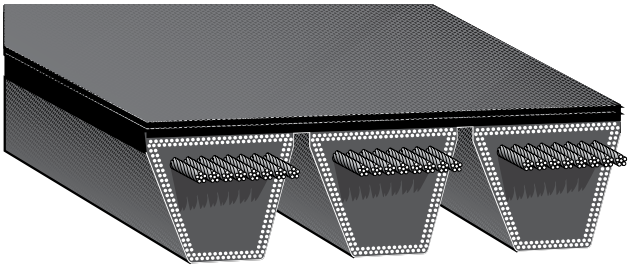
5VL CROSS SECTION VIEW



For longer 5V, as well as 3V and 8V laminated profiles not listed here, contact your Goodyear Engineered Products PTP industrial distributor.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

HY-T® Wedge Torque Team®



Part No: 3/8V1900

3/	3 Rib Joined Construction
8V	1.00″ Top Width – Narrow Profile Rib
1900	190.0″ Nominal Outside Length
	Single Envelope Ply on 5Vs
	2 Envelope Plies on 8Vs
	Envelope Uncogged Construction Shown

Tame Your Problem Drives

Pulsation, vibration, shock loads, and misalignment are problems for any team of V-belts, no matter how perfectly matched the individual units. These conditions often lead to chronic belt whip or to belt turnover, resulting in premature wear or sudden failure of one or more belts. Of course, when one belt goes, the whole team has to be replaced.

HY-T Wedge Torque Team belts are built with multiple belts joined by a tough, rubber-impregnated fabric backing that regulates belt travel so all ribs pull together as a single, perfectly matched team. Yet each rib is free to wedge into the sheave groove for maximum traction, maximum power, and transmission efficiency.

Operating in standard sheave grooves without sheave or drive modification, they can tame any problem drives now in operation. Or they can fit right in with your new drive designs without special modifications.

Designed & Built to Deliver Superior Performance

V-belt performance begins with the tension members, so we built HY-T Wedge Torque Team V-belts with super strong Vytacord. It provides the high-strength, high-horsepower rating capacity needed to effectively transmit drive power. And it's tough enough to tolerate the misalignment that quickly destroys belts. The Vytacord material is a polyester construction with excellent strength and minimal elongation. Drive performance is consistent, reliable, and predictable over the life of the belt.

We then add a tough oil-and abrasion-resistant fabric backing to provide maximum longitudinal flexibility and lateral strength to withstand the dynamic forces acting within a joined belt. The backing also has special adhesion characteristics that enable it to bond to the V-sections to maintain the integrity of the belt.

Applications

For shock load applications. Ideal for pulsating loads, high capacity drives, and for short-center, heavy-duty drives.

Key Features & Benefits

- Narrow profile ribs provide savings through efficiency.
- Joined construction for problem drives.
- Strong Vytacord® tensile members.
- Tough fabric backing.
- Oil, heat, ozone, and abrasion resistant.
- Available in raw edge construction with cogs or envelope construction.
- Matchmaker to eliminate mismatch.
- Static conductive.*

The cushion is made of fiber-reinforced, engineered compounds providing oil, heat, ozone, and abrasion resistance.

Wedge or Envelope Constructions Provide Optimum Performance

HY-T Wedge Torque Team belts are available in a raw edge construction with cogs for increased flexibility and heat dissipation or envelope construction for drives where pulsation, shock loads, high tension, and long center are involved.

HY-T Wedge Torque Team Cogged belts have high-horsepower belt construction and are identified with a 3VX or 5VX prefix and are available in lengths up to 140″. The cogged construction provides the high flexibility required for short center distances. The cogs also provide a larger surface area to dissipate heat and prolong belt life. Improved material properties and advanced construction technology result in an average horsepower increase of 30% over standard joined "Classical" V-belts.

HY-T Wedge Torque Team Envelope belts are identified with a 3V, 5V, or 8V prefix and are recommended for drives where pulsation, shock loads, high tension, and long centers are involved. They feature a continuous V-section that is protected by a wide angle, synthetic fabric-impregnated, high-quality rubber compound. The unique envelope achieves the high strength that the HY-T Wedge Torque Team belts need to withstand high loading forces. It also helps provide the torsional rigidity in long center drives delivering the traction needed for accurate tracking and precision performance.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

HY-T® Wedge Torque Team®

Matchmaker® Performance

Our Matchmaker technology results in belt consistency run to run. That means each HY-T Wedge Torque Team is equal in size and performance to every other HY-T Wedge Torque Team belt in that size, no matter when or where it was produced.

By eliminating mismatch problems, there is no costly and complicated belt matching to get a drive back on line; no problems with belts that are too tight or too loose.

Available in the Most Extensive Stock Line in the Industry

HY-T Wedge Torque Team belts are available from stock in any number of belts per team, up to the number of ribs indicated. Nonstock lengths are also available in these rib counts, up to a maximum of 730″ (180″ for 3V cross sections).

	Single Envelope Ply on 5Vs, 2 Envelope Plies on 8Vs

APPLICATIONS

Ultimate upgrade belt; for all heavy-duty industrial machinery and equipment. Ideal for operation in harsh elements on the toughest high horsepower drives.

- Crushers
- Saws
- Sanders
- Blow Tanks
- Washers
- Screens
- Lathes
- Dryers
- Chain Drives

KEY FEATURES & BENEFITS

- Narrow profile ribs provide savings through efficiency.
- Joined construction for problem drives.
- Up to 50% more horsepower capacity.
- High-strength Flexten tensile members.
- Oil, heat, ozone, and abrasion resistant.
- Static conductive.*

PERFORMANCE PLUS FOR HIGH HORSEPOWER DRIVES

Torque Team Plus belts are our highest capacity V-belts and known for strength, durability, and performance.

Their tension members are Flexten or aramid cable cords. They are twisted from aramid fiber which is five times stronger than steel, then are treated for improved adhesion, improved flex life, and increased resistance to shrinkage. Torque Team Plus belts exhibit only one half of the initial elongation of other belts and maintain greater dimensional stability over the life of the belt. They stand up to higher horsepower, high-tension drive requirements, shock loads, and abusive installations better than standard joined belts, multiple V-belt teams, or chain and sprocket drives.

The cushion is made of a highly engineered compound that resists harsh operating environments and compression fatigue. The envelope is also rubber compound-impregnated to protect the carcass from abrasion, heat, ozone and oil. Together, these components offer a strong, flexible, efficient belt with extended service life.

THE ADVANTAGES OF TORQUE TEAM PLUS BELTING

With Torque Team Plus, there's less cost involved in the drive design due to the fact that each belt can handle a given load with a narrower width belt than either multiple V-belt or chain and sprocket drives. This means that there is less cost incurred for the drive medium (belts/chains), less cost for the narrower sheaves and pulleys they use, and less cost for the downtime and labor involved in the retensioning required by both multiple V-belt and chain belt drives. There is no need for the lubricants and lubrication system that chain drives need. These are some very clear advantages, especially when you consider that you get these savings along with a dramatic performance advantage.

There is also less weight because the smaller sheaves used for drives using Torque Team Plus belts are a dramatic 50% lighter than a sheave required to drive an equal horsepower multiple V-belt drive. When compared to an equal horsepower chain drive, the sheave weighs an incredible 65% less than the sprocket required for the chain drive.

Torque Team Plus is more compact. In fact, a typical Torque Team Plus belt is only one-third the width of an equivalent multiple V-belt team. It needs 17% less space than an equivalent chain drive.

And since Torque Team Plus belts give you all the advantages of the joined principal (smooth tracking, no belt turnover, no matching problems, less belt threatening vibration, even and consistent tensioning), there is less maintenance required.

PREMIUM TORQUE TEAM PLUS BELTS REQUIRE ADEQUATE SHEAVES

The high strength of Torque Team Plus belts provides exceptional high-torque capabilities and horsepower ratings. These high belt capacities may exceed standard sheave capabilities. To assure safety and satisfactory drive operation, consult your sheave supplier for sheave recommendations.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

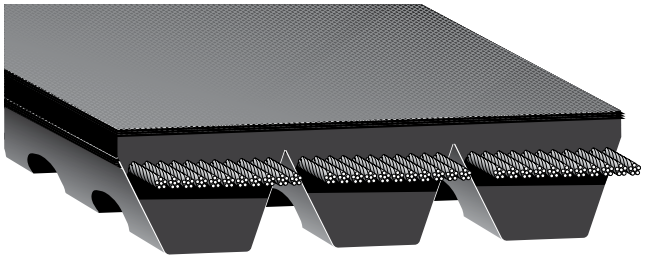
HY-T® TORQUE TEAM® (CLASSICAL)



Part No: 3/BX112

3/	3 Rib Joined Construction
B	0.66″ Top Width – Classical Profile Rib
X	Premium Cogged Construction
112	Approximate 112″ Inside Length
	Cut-Edge, Molded Cog Construction Shown

APPLICATIONS

For shock load applications. Ideal for pulsating loads, high-capacity drives, and short center heavy-duty drives.

KEY FEATURES & BENEFITS

- Classical profile ribs.
- Joined construction for problem drives.
- High-strength Vytacord tensile members.
- Available in cut-edge or envelope construction with Plioflex cushion.
- Tough fabric backing.
- Heat, ozone, and abrasion resistant.
- Matchmaker to eliminate mismatch.
- Static conductive.*

DESIGNED & BUILT TO DELIVER SUPERIOR PERFORMANCE

HY-T Torque Team Classical belts are built with strong Vytacord® tension members. This provides the high-strength, high-horsepower rating capacity needed to effectively transmit drive power. And it's tough enough to tolerate the misalignment that quickly destroys belts. The Vytacord material has a very good dimensional stability. Drive performance is consistent, reliable, and predictable over the life of the belt.

We then add a tough oil- and abrasion-resistant fabric backing to provide maximum longitudinal flexibility and lateral strength to withstand the dynamic forces acting within a joined belt. The backing also has special adhesion characteristics that enable it to bond inseparably to the V-sections to maintain the unitary integrity of the belt.

The cushion in the envelope construction is fiber-loaded Plioflex®. Cut-edge constructions have a fiber-loaded, latest-technology compound that contributes heat and oil resistance and strength.

CUT-EDGE OR ENVELOPE CONSTRUCTION PROVIDE OPTIMUM PERFORMANCE

HY-T Torque Team Classical belts are available in a cut-edge construction with cogs for increased flexibility and heat dissipation or envelope construction for drives where pulsation, shock loads, high tension, and long centers are involved.

HY-T Torque Team Cogged belts are high horsepower belt constructions identified with a BX or CX prefix and are available in lengths up to 136″. The cogged construction provides the high flexibility required for short center distances. The cogs also provide a larger surface area to dissipate heat and to prolong belt life.

HY-T Torque Team Envelope belts are identified with a B or C prefix and both cogged and non-cogged are static conductive. They are recommended for drives where pulsation, shock loads, high tension, and long centers are involved.

MATCHMAKER® PERFORMANCE

Our Matchmaker technology results in belt consistency run to run. That means each HY-T Torque Team Classical belt is equal in size and performance to every other HY-T Torque Team Classical belt in that size, no matter when or where it was produced.

By eliminating mismatch problems, there is no costly and complicated belt matching to get a drive back on line; no problems with belts that are too tight or too loose.

To learn more visit www.goodyearep.com/ptp.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

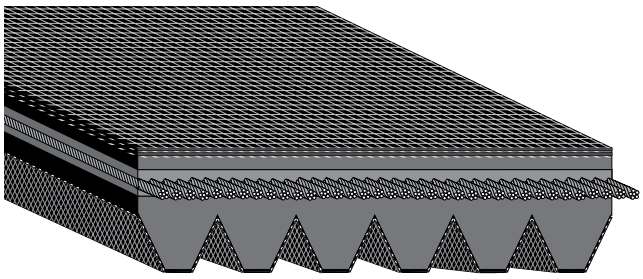
POLY-V®



Part No: 180J6

18.0″	Nominal Outside Length
J	J Section Poly-V
6	6 Ribs

APPLICATIONS

For small sheave compact designs requiring limited vibration. Ideal for high-speed ratio drives with short center distances.

- Exercise Equipment
- Medical Equipment
- Farm Equipment
- Automobiles
- Power Equipment
- Machine Tools

KEY FEATURES & BENEFITS

- Multiple V-ribbed profile provides friction and wedge advantages.
- High-grade engineered rubber.
- Strong Vytacord® tensile member.
- L & M cross sections are milled in shorter lengths and are molded in longer lengths.
- Heat, ozone, and abrasion resistant.

ONE BELT THAT CAN DO THE WORK OF MANY

The Poly-V belt is a single, endless belt with longitudinal V-shaped ribs that mate consistently with the V-grooves in the sheaves. It combines the convenience of a thin, one-piece flat belt with the strong gripping traction of multiple V-belts to make the Poly-V belt far better than either for many applications.

ONE CONTINUOUS TENSION MEMBER FOR MATCHLESS PERFORMANCE

To distribute the drive load evenly across the full width of the sheave, the Poly-V belt is built as a single unit with a completely supported, uninterrupted tension member. There is no matching problem. No separate belts to turn over, grab, slip, or interfere with each other.

The thin cross section profile allows use of smaller pulleys than standard V-belts, and Poly-V belts handle speed ratios of 40:1.

With all this capacity, the Poly-V belt tracks properly without special guides, flanges, crowns or deep grooves. And it resists seating in the grooves, so speed ratios remain more consistent and output speed remains more uniform.

MORE POWER IN LESS SPACE

Continuous engagement with the sheave driving surface gives you greater power capacity per inch of width. In addition, wasted space between separate V-belts is eliminated and converted into narrower, shallower grooves. These provide substantially greater contact area for stronger and more uniform traction.

LONGER BELT & SHEAVE LIFE

Complete support of the tension member, combined with full and uniform engagement with the sheave grooves, eliminates differential driving and equalizes belt stresses. That, in turn, minimizes belt elongation and leads to significantly longer flex life.

Even distribution of stress on the belt also reduces differential loading and wear on sheaves. It's not unusual for Poly-V belt sheaves to last significantly longer than standard V-belt sheaves and to experience lower maintenance requirements during this longer life.

IMPROVE DRIVE DESIGN WHILE YOU REDUCE DRIVE COST

The combination of high-power capacity and low-profile design means the Poly-V drive can improve the drive design while lowering drive costs.

Poly-V belts allow narrower mounting clearances, need less center distance adjustment, and require less take-up for tensioning. Additionally, they allow the use of sheaves that are narrower in width and smaller in diameter without sacrificing power capacity. Smaller, narrower sheaves mean a reduction in weight so more of the drive gets to the load for increased efficiency.

GOODYEAR ENGINEERED PRODUCTS

V-Belts

V-belts include not only traditional classical and narrow profiled belts, but also Double-V and FHP belts. When synchronization or timing is not required, V-belts make an excellent low-cost, quiet, and efficient means of transmitting power. However, not all V-belts perform the same. Depending on your application and your objectives, some V-belts will be better at getting you closer to your end goal.

Narrow V-Belts

Effectively handling drives from 1 to 1,000 hp, these belts rank high in horsepower-hours per dollar, the ultimate measure of drive value. The narrow-belt cross sections (3V, 5V, and 8V), offer higher power capacity for any sheave size and weight.

The narrow or "wedge" design provides more tensile member support than classical V-belts. Narrow belts handle an equivalent load, but with narrower face width and smaller diameters than the traditional classical V-belts. These features allow the use of smaller belts or fewer belts to transmit the load, an important advantage if your goal is to maximize power transmission efficiency by reducing drive weight and size.

Classic V-Belts

The most widely used V-belts are A, B, C, and D classical belts. Used more out of habit and convenience than design, these belts can handle fractional to 500-hp drives, usually at the lowest cost. However, they occupy more space, and the drives weigh more than narrow-belt drives. Also, classical belts are usually less efficient than narrow belts. But their versatility and wide range of sizes and types make them an attractive alternative to wedge belts. Many classical belts are used for replacement because it is considered too costly to replace sheaves when upgrading from classical to narrow or other belt types. Therefore, when replacing classical sheaves, it is an opportune time to upgrade to narrow or other belt types.

Specialty V-Belts

When equipment calls for metric precision, you need a belt that not only measures up, but one that won't get lost in translation. GY Metric belts are engineered to universal metric profiles, but manufactured by Veyance Technologies in North America, so you don't have to go elsewhere to get them. Strong, flexible and able to work in wide temperature ranges, GY Metric® replaces many common metric cross section belts such as XPZ, XPA, SPA, ,XPB, SPB, XPC and SPC.

Double-V or Hex Belts

A variation of the classical belt, Hex belts come in AA, BB, CC, or a deep CCP cross section. These belts transfer power from either side in serpentine drives. A drive design using Hex belts is more complicated and engineering manuals should be consulted when replacing or troubleshooting these drives.

FHP (Fractional Horsepower Belts)

The 3L, 4L, and 5L light-duty FHP belts are part of the V-Belt line also. As the name implies, these belts are used soley on drives of 1 hp or less.

Cogged, Raw-Edge Construction vs. Envelope Construction

Goodyear Engineered Products provide a complete offering of cogged, raw-edge belts in narrow, classical, and FHP styles. Designated 3VX, 5VX, AX, BX, CX, 4L, and 5L, cogged, raw-edge V-belts have higher capacity and efficiency, and they use smaller sheaves than traditional envelope (wrapped) belts. These belts have a higher coefficient of friction and are more aggressive, which makes them a very efficient belt for power transmission.

Unlike conventional fabric-covered V-belts, raw-edge belts have no cover. Thus, the cross-sectional area normally occupied by the cover is used for more load-carrying cord. Cogs on the inner surface of the belt increase air flow to enhance cooler running. They also increase flexibility, allowing the belt to operate with smaller sheaves. With classical V-belts, certain under-designed or problem drives can be upgraded to "satisfactory" by substituting classical cogged belts for classical envelope belts without replacing sheaves.

Because of their higher coefficient of friction, cogged belts tend to be more sensitive to alignment. While envelope belts can tolerate some misalignment, cogged belts are more likely to turn over under the same conditions. Cogged belts should not be used in clutching drives, drives with severe shock loads, and drives that have changing center distances, such as shaker screens. In these applications, the aggressive nature and flexibility of cogged belts can cause vibration, belt turnover, and belt breakage. Cogged belts should also be avoided in drives that require slippage during frequent stops and starts.

Open End V-Belting

Part No: B-Open End
B 0.66" Top Width – Classical Profile
Available Roll Lengths (see chart below)

Applications

Ideal solution for temporary replacement in emergency situations or for long center drives. They can be used on all types of industrial applications.

Key Features & Benefits

- Universal classical profile.
- Multiple-ply, square-woven fabric tension members.
- Oil, heat, ozone, and abrasion resistant.
- Easy installation with spliced ends.
- Static conductive.*

The Ideal Solution for Problem Applications & Emergency Replacements

Goodyear Engineered Products Open End V-belting is the perfect answer for applications where endless V-belts are difficult or impossible to install. It also serves as an ideal emergency replacement when the exact length of endless belt is not readily available.

Open End V-belting will operate in any drive as long as RMA standard sheave dimensions are observed and the recommended maximum speed of 3,500 feet per minute is not exceeded. It is not recommended as a permanent substitute for endless V-belts except on drives where standard belts cannot be installed.

Horsepower Ratings

The horsepower ratings for fastened Open End V-belts are approximately 30% of published horsepower ratings for Goodyear Engineered Products standard multiple V-belts as shown in our V-belt Engineering Manual (20044896).

Note: Because of differences in the elongation characteristics and variations in cross section dimensions, Open End V-belts and Endless V-belts should not be used together on multiple drives.

Regular Construction	Cut Lengths
A Section B Section C Section D Section	A Section B Section C Section

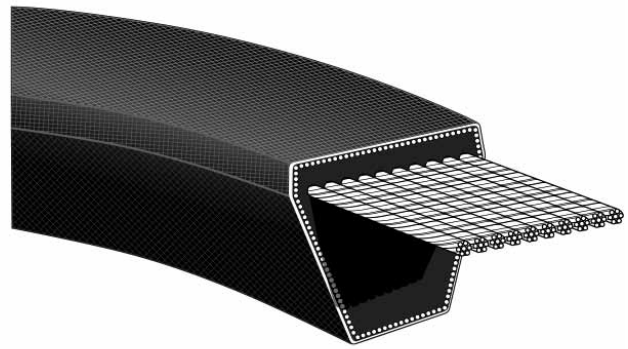
Roll Lot: Either 250' (max. 2 pcs.) or 500' (max. 3 pcs.) approx. rolls. "D" section available only in 250' (max. 2 pcs.) approx. rolls.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

NEW!

WEDGE TLP™ NARROW V-BELTS

WedgeTLP™



Part No: 3V950
3V 0.38″ Top Width — Narrow Profile
950 95.0″ Nominal Outside Length
Envelope Uncogged Construction Shown

APPLICATIONS

Premium, longer-life narrow-profile belts for compact, high-horsepower drives. Excellent in short-centered drives or where high shock loads are present; can be used any place you find traditional narrow V-belts, but require a more robust composition for improved service life.

KEY FEATURES & BENEFITS

- Homogenous design
- Specialty blended, fiber rich compounding
- Higher modulus, higher denier cord
- Virtually no maintenance
- Static conductive*, with oil-resistant surface
- Supreme durability and wear resistance

INTRODUCING THE NEWEST, LONGEST-LASTING NARROW V-BELT IN THE GOODYEAR ENGINEERED PRODUCTS LINEUP

Constructed with a homogenous, one-piece design, the Wedge TLP Narrow V-Belt delivers better, lasting performance. Its high-modulus, high-denier cord can handle a significant increase in horsepower over our current HY-T® Wedge.

LITTLE MAINTENANCE, WITH NO WORRIES

Wedge TLP's unique advanced construction process includes use of a specialized reinforcement and compounds that make this narrow V-belt virtually maintenance free. Install this belt the first time with proper installation techniques and take advantage of reduced downtime and maintenance.

INCREASE SAVINGS BY USING FEWER BELTS

With its greater horsepower capacity, Wedge TLP allows you to deliver the same amount of horsepower with a lesser number of belts. Fewer belts mean fewer sheave grooves; the combination of the two means lower-cost belt drives.

DURABILITY THAT GOES THE DISTANCE

Wedge TLP belts offer supreme durability and wear resistance—plus better fit even in worn sheaves. That's all because of its two envelope plies and specialty blended, fiber-rich compounding that help support increased horsepower, with less deformation under tension.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

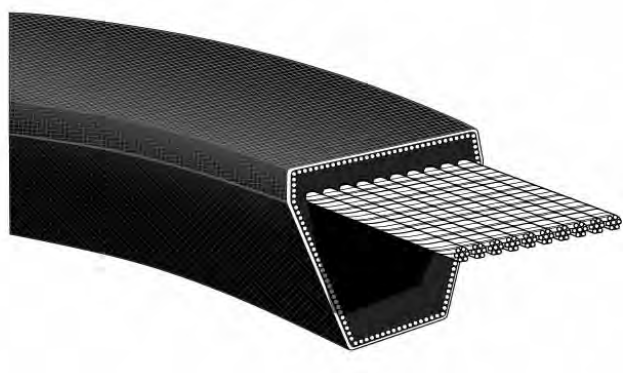
HY-T® WEDGE



Part No: 5V1400
5V 0.62″ Top Width – Narrow Profile
1400 140.0″ Nominal Outside Length
Envelope Uncogged Construction Shown

APPLICATIONS

Narrow profile belts for compact, high horsepower drives, high shock loading on short centers and small diameters. For designing compact, heavy-duty drives where space limitation is a factor.

KEY FEATURES & BENEFITS

- Narrow profile provides savings through efficiency.
- Greater horsepower than the classical belt.
- Strong Vytacord® (polyester) tensile members.
- High-grade engineered rubber.
- Heat, ozone, and abrasion resistant.
- Available in raw-edge construction with cogs or envelope construction.
- Matchmaker® to eliminate mismatch.
- Static conductive.*

A NARROWER CROSS SECTION & STRONGER CONSTRUCTION REDUCES DRIVE COSTS

The savings start in the basic wedge or narrow design of the HY-T Wedge belt. It has a narrower cross section than standard V-belts so it distributes stresses more uniformly to deliver more consistent, more reliable power transmission.

A wedge cross section means the belts are narrower and weigh less. Narrower belts allow for the use of thinner and lighter sheaves, resulting in a more efficient drive.

The savings continue through the higher horsepower capacity provided by Goodyear Engineered Products HY-T V-belt construction. Vytacord tension members, provide strength and dimensional stability. Higher horsepower capacity is also provided through a tough engineered rubber compound cushion, adding to belt strength.

HY-T Wedge, with its narrow cross-section, makes it possible to achieve a required horsepower with fewer HY-T Wedge belts than with standard V-belts, reducing sheave size, sheave costs, and belt costs even more.

Since less power is required to run the smaller, lighter drives, more power gets to the load. Therefore, you may be able to downsize drive motors and/or increase drive efficiency for even more savings.

MATCHMAKER® PERFORMANCE

HY-T Wedge belts eliminate mismatch problems as each Matchmaker belt is mirrored in size and performance to every other HY-T Wedge belt in that size, no matter when or where it was produced.

CUT-EDGE OR ENVELOPE CONSTRUCTIONS PROVIDE OPTIMUM PERFORMANCE

HY-T Wedge belts are available in a cut-edge construction with cogs for increased flexibility and heat dissipation or envelope construction for drives where pulsation, shock loads, high tension, and long centers are involved.

HY-T Wedge Cogged belts are high-horsepower belt constructions that are identified with a 3VX and 5VX prefix and are available in lengths up to 200″. The cogged construction provides the high flexibility required for short center distances. The cogs also provide a larger surface area to dissipate heat and prolong belt life. Improved material properties and advanced construction technology results in an average horsepower increase of 30% over standard “Classical” V-belt and wedge belts.

HY-T Wedge Envelope belts are identified with a 3V, 5V, or 8V prefix and are recommended for drives where pulsation, shock loads, high tension, and long centers are involved. It features a continuous V-section that is protected by a wide angle, synthetic fabric impregnated with high-quality engineered rubber compound. This unique envelope achieves the high strength HY-T Wedge belts need to withstand high loading forces. It also provides the torsional rigidity required in long center drives delivering the traction needed for accurate tracking and precision performance.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

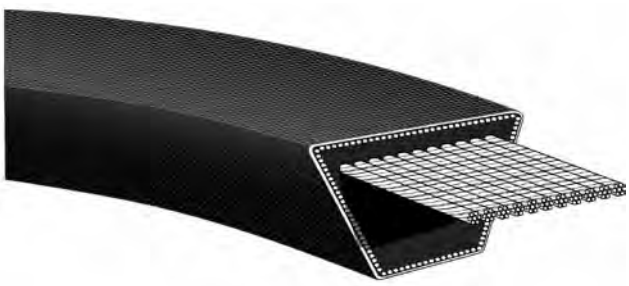
HY-T® PLUS (CLASSICAL)



Part No: B75

B	0.66″ Top Width – Classical Profile
75	Approximate 75″ Inside Length

APPLICATIONS

Designed for operating at high speeds over small diameter pulleys and short center distances. Also for use in multiple V-belt drives where high shock load and heavy-duty loads are encountered.

KEY FEATURES & BENEFITS

- Universal classical profile.
- High-strength Vytacord® tensile members.
- Engineered rubber-impregnated envelope.
- Engineered rubber compound cushion and insulation.
- Dual branded (Classical and FHP part numbers).
- Oil, heat, ozone, and abrasion resistant.
- Matchmaker to eliminate mismatch.
- Static conductive.*

LESS ELONGATION IS THE KEY TO PERFORMANCE

Whether you're talking about rubber belts or metal chains, most materials will elongate when put to use. The secret to reliable performance isn't to eliminate elongation, but to control it so that it is minimal, predictable, and uniform. To achieve these criteria, we developed the Vytacord tensile member.

Vytacord provides the high-strength, high-horsepower rating capacity needed to effectively transmit today's drive power. It's even tough enough to tolerate slight sheave misalignment that would quickly destroy ordinary belts.

The Vytacord tensile member provides dimensional stability. As a result, each belt of a given size will maintain its length consistency, no matter when or where it was produced.

The exceptional dimensional stability properties of HY-T Plus eliminates matching problems, improves performance, and increases service life.

IMPROVED MATERIALS ARE THE KEY TO THE DURABILITY & VERSATILITY OF HY-T PLUS

The vast improvements in all components of HY-T Plus construction complement the quality of the Vytacord tensile member.

Our engineered heat- and oil-resistant rubber compound, is used in both the cushion and insulation sections of HY-T Plus. Belt construction provides the flexibility on small pulleys. As a result the belt is able to serve a dual purpose for both classical and FHP, while offering more versatility than any other classical belt.

The HY-T Plus' envelope construction assures optimum warp and fill thread angle, providing belt flexibility. In addition, the fabric is treated with Goodyear Engineered Products exclusive engineered rubber compound for long wear and resistance to heat, oil, and other environmental hazards. The envelope also assures that the belt dissipates static electricity, as specified in RMA bulletin IP3-3.

The cushion is also crush-resistant and cool running to maintain its shape, fit, and strength longer. And with the longer service life achieved by HY-T Plus belts, replacement of belts is less frequent. Overall, belt costs are reduced, downtime is minimized, and equipment productivity is maintained.

LESS INVENTORY REQUIRED

The HY-T Plus can be used in FHP applications. Conversely, rarely do FHP belts perform in HY-T Plus (classical) applications.

The result is a reduced inventory that equates to dollars taken off the shelves and into your pockets.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

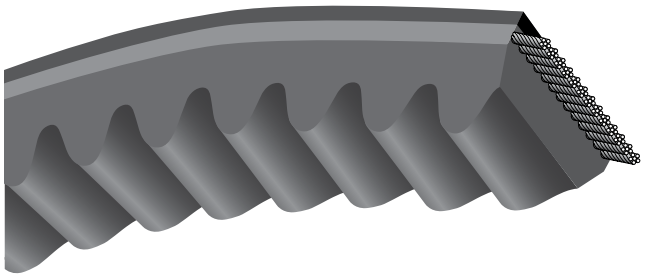
TORQUE-FLEX®



Part No: BX75

B	0.66″ Top Width – Classical Profile
X	Premium Cogged Construction
75	Approximate 75″ Inside Length
	Cut-Edge, Molded Cog Construction Shown

APPLICATIONS

Designed for the tough, small sheave, high-tension drives.

KEY FEATURES & BENEFITS

- Premium classical profile construction.
- 25% – 30% higher power ratings than standard V-belts.
- Strong Vytacord® (polyester) tensile members.
- Engineered cushion compound.
- Cut-edge cogged construction on most sizes.
- Heat, ozone, and abrasion resistant.
- Matchmaker® to eliminate mismatch.
- Static conductive.*

MORE HORSEPOWER PER DOLLAR

Your drives can deliver the horsepower you want at a lower component cost—and with lower energy costs—when you include Goodyear Engineered Products Torque-Flex V-belts in the design.

They are fully cogged to provide the flexibility needed to keep their high-traction rubber edges in contact with the sheave grooves. This high efficiency allows you to achieve the horsepower you need at a lower total drive cost.

EXACTING PRECISION & UNIFORMITY

Rigid quality assurance programs imposed during Torque-Flex V-belt manufacture result in belt angles and belt lengths which are more exact than standard belts. This results in quiet, smooth-running, and long-lasting belts. Think what that can save in reduced downtime and belt maintenance.

Of course, with such exacting production requirements, our Torque-Flex V-belts also achieve consistent uniformity from run to run. This outstanding consistency means you can be sure that two belts of the same size designation will match, no matter when they were produced. As a result:

- You eliminate mismatching problems caused by individual belts that may be too loose or too tight.
- You simplify ordering procedures—no lengthy specifications, detailing match-ups, and sizing.
- No complicated time-consuming matching. Your Goodyear Engineered Products belts are automatically matched when you buy them.
- You reduce your in-plant inventory. The Matchmaker system covers your needs with a minimum of belts to save you space and inventory dollars.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

MORE SAVINGS FROM FEWER BELTS

The high-strength and high horsepower capacity of Torque-Flex V-belts means you need fewer belts and fewer sheave grooves to deliver the same amount of horsepower.

ENERGY-SAVING EFFICIENCY

The same design and construction features which lead to high horsepower ratings for Torque-Flex V-Belts also lead to improvements in energy efficiency of up to 4%, depending on sheave diameter.

COGGED VS. NONCOGGED BELT EFFICIENCY

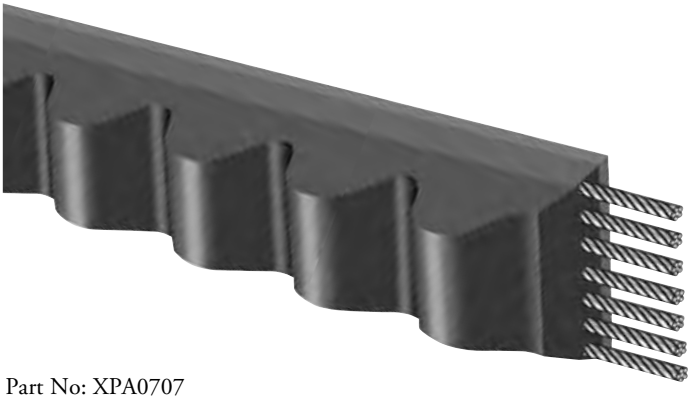
GY METRIC® BELTS



Part No: XPA0707

X	Premium Cogged Construction
PA	Metric A Profile
0707	707mm Datum Length

APPLICATIONS

Specialty V-belt for a wide variety of heavy-duty, temperature-sensitive applications.

KEY FEATURES & BENEFITS

- Wedge profile allows for a smaller drive package and lower operating costs.
- Premium fiber loading adds strength and cord support.
- Raw-edge, molded cog and envelope constructions.
- Optimum wedging action provides maximum torque carrying performance.
- Heat, ozone and abrasion resistant.
- Static-conductive** for specialized applications.

VERSATILITY

GY Metric belts operate under one of the widest temperature ranges in the industry, from -65°F to 180°F (-54°C to 82°C)*. It's that versatility and our experience in rubber compounding that can provide superior performance under the toughest conditions.

UNIVERSAL FIT

When equipment calls for metric precision, you need a belt that not only measures up, but one that won't get lost in translation. GY Metric belts are engineered to universal metric profiles, but manufactured by Veyance Technologies in North America, so you don't have to go elsewhere to get them.

SUPERIOR PERFORMANCE UNDER TOUGH CONDITIONS

GY Metric belts are strong, flexible and able to work within a wide temperature range, offering superior performance under the toughest conditions. So they do more than measure up. They stand apart.

MORE SAVINGS FROM FEWER BELTS

The high-strength and high horsepower capacity of Torque-Flex® V-belts means you need fewer belts and fewer sheave grooves to deliver the same amount of horsepower.

*Temperature range is based upon test data obtained on select belt sizes manufactured from our latest rubber compounds, consistent with standard MIL-B-11040-E, section 3.8.

**Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

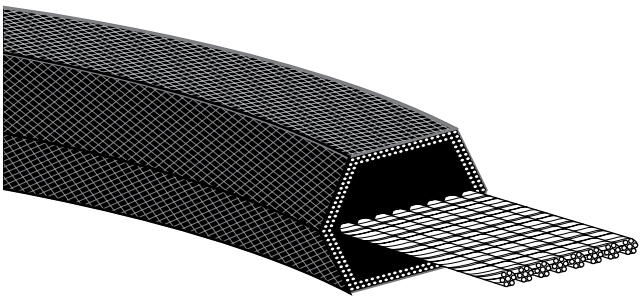
HEX



Part No: BB75

BB	B Section Double Classical Profile 0.66″ Center Width
75	Approximate 75″ Inside Length

APPLICATIONS

Used on drives having one or more reverse bends and usually where power must be transmitted to or from the belt in both the usual and reverse positions.

- Lawn and Garden Equipment
- Agitators
- Conveyors
- Mixers
- Mule Drives
- Crushers

KEY FEATURES & BENEFITS

- Dual-sided classical profile.
- High-strength Vytacord® tensile members.
- Engineered rubber compound-impregnated envelope.
- Engineered rubber cushion and insulation.
- Oil, heat, ozone, and abrasion resistant.
- Static conductive.*

DEPENDABLE POWER FROM BOTH SIDES

Hex belts, also known as double V-belts, are designed for use on drives with one or more reverse bends. They usually transmit power from both sides of the belt.

To meet the multiple-bend and dual-power requirements, we build Hex belts with rugged Vytacord tension members. They deliver maximum strength with minimum elongation. They also work with all the other quality materials that are a part of our Hex belts to deliver maximum performance over a long, trouble-free life.

Hex belts are available in AA, BB, and CC cross sections. A special Dry Can Hex construction is available with a special deep CC cross section designated CCP.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

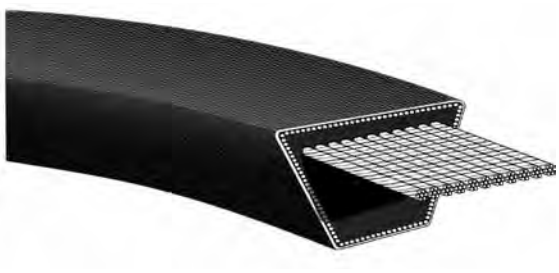
INSTA-POWER® (FLEXTEN® CLASSICAL)



Part No: 84310

84	Top Width Designation: 84 denotes 4/8″ top width
31	Length in Inches
0	Tenths of an Inch
	A29F — Equivalent Classical Size

BUILT FOR STRENGTH & ENDURANCE

Every element of the Insta-Power belt is designed to deliver premium, long-life performance in demanding outdoor power equipment service. Insta-Power belts are engineered to take the abuse of repeated sudden shock loads, tolerate high ambient temperatures, and resist the damaging effects of oil and dust.

The fabric cover on Insta-Power belts is impregnated with our exclusive engineered rubber compound for high-wear, abrasion, and oil resistance. It also resists drying and cracking, even at high temperatures. The compression section is specially compounded to provided the excellent flexibility required for a wide variety of high-stress drives. The load carrying tensile members are high-strength Flexten cable cord with proven reliability in lawn and garden applications.

APPLICATIONS

Delivers high performance consistently in lawn and garden drives up to 20 horsepower. Also ideal for other power equipment where reverse bend idlers, misalignment, and quarter-turn drives cause ordinary belts to fail.

KEY FEATURES & BENEFITS

- Flexten classical profile construction.
- High-strength Flexten tensile members.
- Engineered rubber cushion compound.
- Premium envelope construction.
- Triple part number branding (Insta-Power, Classical, and Fraction horsepower).
- Oil, heat, ozone, and abrasion resistant.
- Static conductive.**

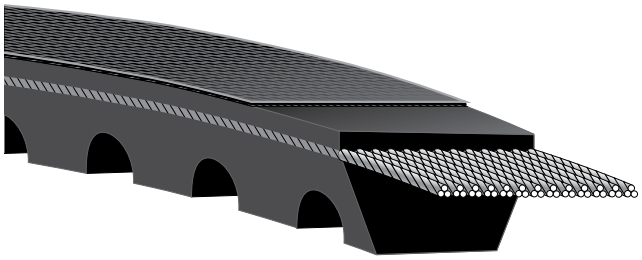
FHP



Part No: 4L560
4L 0.50″ Top Width
560 56.0″ Nominal Outside Length
Cut-Edge, Molded Cog Construction Shown

Applications

For light-duty fractional horsepower motors. Molded cogs allow for use in applications where the belt is expected to perform around smaller sheave diameters.

- Shop Equipment
- Home Appliances
- Light-Duty Machinery
- Blowers

Key Features & Benefits

- Universal classical profile.
- Engineered rubber cushion and insulation.
- Cut-edge, molded cogged construction.
- Heat, ozone, and abrasion resistant.

Quiet, Smooth-Running, Exceptionally Energy Efficient

You no longer have to accept the lower energy efficiency associated with envelope belts on fractional horsepower lightduty drives. Advanced V-belt technology has resulted in the development of a cut-edge, molded cog construction which exceeds conventional envelope belts in every performance category except oil resistance. This has been confirmed in extensive testing which proves that our FHP V-belts run smoother and quieter, last longer, and substantially improve energy efficiency compared to noncogged belts.

Cogged for Cooler Running

The cogged design of our FHP V-belts (standard on 4L and 5L sizes) provides a greater surface area for heat dissipation and allows increased air flow around the belt during operation. These factors help to reduce internal belt temperatures and greatly improve belt life. Of course, the cogged design also improves flexibility, an especially important consideration where minimum or substandard sheave diameters are involved.

Low Vibration for Low Noise

Low cross section vibration in rubber-edged, cogged belts reduces noise generation. This allows you to take advantage of the longer life and high efficiency of FHP V-belts in noise-sensitive equipment. But even in typical factory settings, our FHP V-belts contribute to a quieter operating environment.

Superior Efficiency for Improved Performance

The historic inefficiency of FHP drives can be traced directly to the inability of a relatively large envelope belt to transmit a low-power force efficiently. Transmission loss is especially significant in factories using large numbers of drives and where small diameter sheaves are involved. The aggregate loss can be significant enough to have an adverse effect on equipment performance.

These FHP V-belts efficiency begins at 93% when used with smaller sheaves and increases dramatically as the sheave diameter increases (Figure 1). Since more of the rated power of the drive is delivered, actual performance nearly matches design performance.

In addition, the efficiency of our FHP V-belts offers you the opportunity to achieve full operating power requirements with a lower horsepower drive, reduced energy requirements, or both. These considerations can provide highly desirable economic advantages whether you're a drive manufacturer or a drive user.

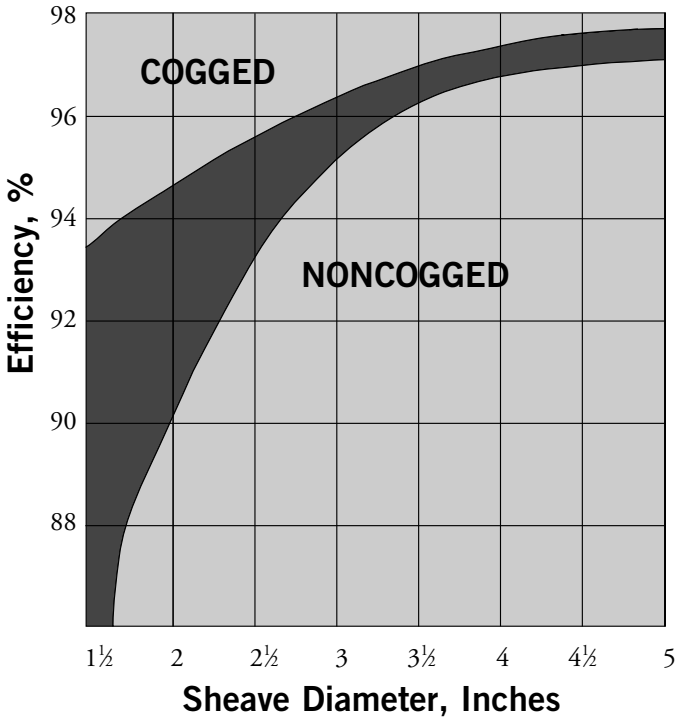


Figure 1 – Efficiency comparison of cogged vs. noncogged FHP V-belts (4L section).

BUSHINGS

Sure-Grip® "Quick Detachable" bushings are easy to install and remove. They are split through flange and taper to provide a true clamp on the shaft that is the equivalent of a shrink fit. All sizes except JA and QT have a setscrew over the key to help maintain the bushing's position on the shaft until the cap screws are securely tightened. Sure-Grip bushings have a very gradual taper (¾-inch taper per ft. on the diameter) which is about half the inclined angle of many other bushings. The result is that the Sure-Grip securely clamps the shaft, with twice the force of those competitive bushings, to provide extreme holding power.

Versatile Sure-Grip bushings permit the mounting of the same mating part on shafts of different diameters, and the mounting of different sheaves on the same shaft using the same bushing. Their interchange ability extends through sheaves, pulleys, timing pulleys, sprockets, flexible and rigid couplings, made-to-order items by Veyance Technologies, and to product lines of several other mechanical power transmission manufacturers.

Sure-Grip bushings are manufactured with the drilled and tapped holes located at a precise distance from the keyseat; thus, a wide mating part having a bushing in each end can be mounted on a common shaft with the two keyways in line. This feature not only facilitates installation but also permits both bushings to carry an equal share of the load.

General Product Info

Sure-Grip®* Bushings

• Sure-Grip bushings conform to the specifications set forth by the Mechanical Power Transmission Association (MPTA) in their CO-1 Guideline of October 1992.

• An "MPB" or "Minimum Plain Bore" bushing is available in most bushing sizes. These bushings are unsplit and have no keyway. These bushings are intended for reboring and other alterations.

• Sure-Grip bushings for inch shafts conform to ANSI B17.1-1967, R1989 for key size versus shaft diameter and keyway dimensions. Square keys are used where possible. For larger bores where a square key is not possible, the required rectangular key is furnished with the bushing.

• Sure-Grip bushings for metric shafts conform to British Standard HS 4235: Part 1:1972 for key size versus shaft diameter and keyway dimensions. For larger bores where it is not possible to maintain the standard keyway depth, a more shallow keyway may be used. Special metric keys are not furnished with the bushing.

V-Belt Sheaves, Synchronous Belt Sprockets, Flat Belt Pulleys, etc.

Materials

• The standard material is class 30 or higher cast iron. Products made from cast iron have a maximum speed limitation of 6,500 foot/minute at the outside diameter. Higher speed requirements dictate the use of higher strength materials.

• For speeds up to 16,000 foot/minute or high shock application requiring greater toughness, special ductile iron products can be made.

Balance

• The standard balance is a one-plane tolerance to a G26 quality grade based on 3,500 RPM or the maximum rated speed. A two-plane balance to a G6.3 quality grade is available at an added cost. Sure-Grip bushed products which are one-plane balanced are marked so the bushing can be reinstalled at the application the same way it was installed for balancing. See MPTA SPB-95 for standard balancing practices.

Standards

• The following products meet or exceed the noted ANSI/RMA design standards.

Classical V-Belt Sheaves	IP-20-2007
Narrow V-Belt Sheaves	IP-22-2007
Synchronous Belt Pulleys	IP-24-2001
Curvlinear Boil Sprockets	IP-27-2009
FHP Belts and Sheaves	IP-23-2009
Hex Belts and Sheaves	IP-21-2009

Special Constructions Available

• We have the capability to assist in your design and quote any specially designed power transmission drive. We are able to offer consistently competitive prices and fast delivery on the following specials plus much more.

V-Belt Sheaves
- Nonstandard diameter requirements.
- Nonstandard number of grooves.
- Unusual hub configurations.
- Deep grooves.
- Metric grooves.
- Added inertia or flywheel effect.

Synchronous Sprockets
- Nonstandard number of teeth.
- Nonstandard face widths.
- Unusual hub configurations.
- Special tooth profiles.
- Added inertia of flywheel effect.

Flat Belt Pulleys
- Nonstandard diameter requirements.
- Nonstandard face widths.
- Unusual hub configurations.
- Split through rim or arm designs.
- All types of special crowns.
- Added inertia or flywheel effect.
- Taper cone arrangements.

Flywheels
- Flywheels per customer design.

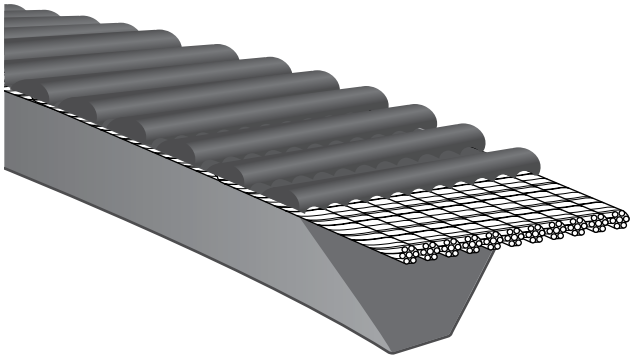
NEOTHANE®



Part No: 5M 710
5M 5mm (3⁄16″) Top Width
710 710mm (27.95″) Outside Length

APPLICATIONS

Specialty belt for specific types of machines and equipment.

- Machine Tools
- Computer Industry
- Woodworking Machines
- Appliances
- Blowers
- Medical Industry

KEY FEATURES & BENEFITS

- Ribbed top for transverse rigidity, flexibility, and cool running conditions.
- Narrow top width for use on narrow, small diameter sheaves and exceptional flexibility on short centers.
- Cords are resistant to elongation or shrinkage, provide great strength and long flex life.
- Polyurethane compounding for firmer grip, greater strength, and high resistance to oil, heat, abrasion, ozone, and fatigue.
- Smooth machined sides for quiet running, vibration-free operation, and uniform grip.
- Sixty-degree angle cross section for uniform support that keeps the load carrying cord in the same plane pulling together.

A DIFFERENT APPROACH TO V-BELTS

Neothane V-belts can provide a different approach to V-belt power transmission for appliances and light-duty machinery. The features of the belt will make it possible to gain competitive advantages in many areas of application.

SMOOTH OPERATOR

Smaller sheave diameters, higher speed ratios, shorter center distances, and higher speeds in belt power transmission applications are possible. Elimination of double reduction drives, made possible by the higher speed ratios permitted, result in decreased space requirements for many applications. The precision characteristics of this belt give a smoothness of operation that reduces noise to a minimum in the appurtenances of a drive.

THE LOW-MAINTENANCE V-BELT ALTERNATIVE

This belt is ideal for machines with long warranty periods. The outstanding characteristics make it virtually maintenance-free and therefore reduce service costs. Greater horsepower can be utilized by the designer with reasonable belt life. Or, for a given amount of power to be transmitted, belt life can be greater than ever before.

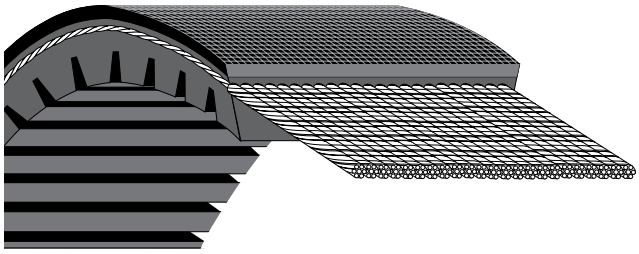
VARIABLE SPEED



Part No: 3226V585

32	¾″ Top Width
26	Angle of Sheave Groove
V	Variable Speed Profile - With Flexten® Tensile Member
585	58.5″ Pitch Length
	Cut-Edge, Molded Cog Construction Shown

APPLICATIONS

For use on variable speed sheave drives requiring exact speed control and maximum range of speed changes. Ideal for recreational equipment, agricultural applications, and machine tools.

- Exercise Equipment
- Medical Equipment
- Farm Equipment
- Automobiles
- Power Equipment
- Machine Tools

KEY FEATURES & BENEFITS

- Durable variable speed profile.
- Super strong Flexten® tensile members.
- Fiber-reinforced, latest compounded technology compression section.
- High-horsepower capacity.
- Milled edge construction for superior dimensional stability.
- Oil, heat, ozone, and abrasion resistant.
- Static conductive.*

TOP PERFORMANCE AT EVERY SPEED

Goodyear Engineered Products Variable Speed belts deliver the speed and horsepower the drives on your equipment were designed to achieve. Excellent transverse rigidity and exceptional flexibility prevent buckling at minimum diameter settings where belt stresses are greatest. Firm gripping action in the contact area provides positive traction for precise, immediate response. Together, they assure reliable, predictable transmission of maximum power over the drive's full operating range.

And top performance also means that you get longer life from Goodyear Engineered Products Variable Speed belts. That translates to less downtime for belt maintenance and more productivity from your equipment, which leads to greater operating economy by any measure.

UNIFORM CROSS SECTION MEANS LESS DRIVE WEAR

The precision forming that goes into every one of our Variable Speed belt assures a completely uniform cross section. This allows even tracking and smooth running without any vibration problems. As a result, the life of the belt—as well as bearings, sheaves, and other drive components—is significantly extended. Longer wear is a great way to save money and increase productivity.

EXCEPTIONAL LENGTHWISE FLEXIBILITY ALLOWS FOR SMALL PULLEYS

We build these belts thin with precise, uniform cogs on the underside for maximum lengthwise flexibility. They can be used on small pulley drives without any sacrifice of gripping action or cross rigidity. Cogging also minimizes bottom cracking, a major cause of premature failure.

TRUE DIMENSIONAL STABILITY & HIGHER HORSEPOWER CAPABILITY FOR LONG BELT LIFE

Our Flexten tension cords get their muscle from a special tempering for maximum strength and resilience. This gives Goodyear Engineered Products Variable Speed belts the dimensional stability they need to carry more horsepower and to experience less elongation over the life of the belt. In short, these Variable Speed belts provide you with longer life on the toughest drives.

*Drive conditions and service variables in combination with time in operation can result in a loss of static conductivity. It is recommended that a conductivity check be added to drive preventive maintenance programs where belt static conductivity is a requirement.

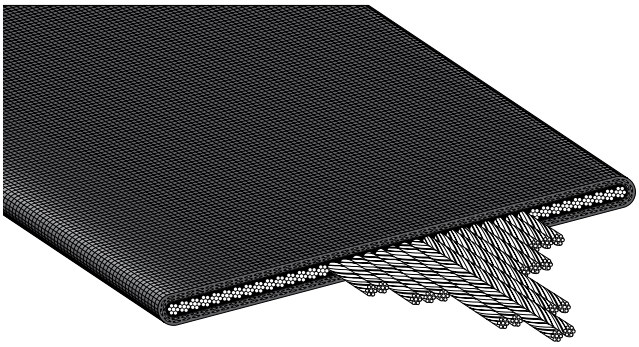
FLAT BELTING (TRULY ENDLESS)



Part No: Compass "L" Flat Belt

TRULY ENDLESS COMPASS® SYNTHETIC CORD BELTS

These belts are extremely flexible and exceptionally long-lasting, even when operating over small pulleys. They are made in four different weights to meet any service requirement.

Goodyear Engineered Products Compass Cord transmission belts are made with a single-layer, reinforcing section for a cross section which is thinner by 25% or more compared to plied belts of equal horsepower capacity. The high-tensile strength, multistrand synthetic cords used in Compass Cord belts provide maximum strength and minimum elongation.

Compass belts are furnished in an abrasion-resistant rubber construction. They can be made with oil-resisting synthetic rubber compounds on special order in widths from 1″ to 36″ and lengths from 25′ to 135′.

TRULY ENDLESS COMPASS 250 & 450 STEEL CABLE BELTS

These Compass Belts are constructed with steel cable for heavy-duty drives. These belts include the features of Compass Cord belts with the added advantage that the load-carrying members are very finely stranded steel cables instead of synthetic rope cords. All Compass 250 and 450 belts are made with oil-resisting compounds throughout, which gives them greatly increased life under operating conditions where oil is present.

They generally handle much higher horsepower loads than any conventional fabric or cord construction belt, are extremely flexible, and readily conform to small pulleys.

APPLICATIONS

Handles a wide range of horsepower and speeds in both industrial and agricultural drives.

- Harvesting Equipment
- Textiles and Forestry
- Hay Equipment
- Industrial Equipment
- Direct Gear Drive Replacement
- Soil Handling
- Food Processing
- Chain Replacement
- Health and Fitness
- Material Handling

KEY FEATURES & BENEFITS

- Smooth, quiet operation and long belt life.
- Uniform belt surface with no splicing.
- High-tensile strength.
- High coefficient of friction.
- Lightweight.
- No lubrication necessary.
- Transverse rigidity.

We manufacture a complete line of flat belting from Truly Endless Compass and Multiple Ply belts to Regulator Power Strap flat belts for the health and fitness industry.

TRULY ENDLESS MULTIPLE PLY BELTS

The Multiple Ply belt is another product in the Truly Endless line. The round-and-round fabric construction can be split into multiple belts from one slab, representing great cost savings.

Various carcass materials are available for Multiple Ply belts, depending on the application. The most highly recommended are polyester/nylon, cotton, nylon, polyester, etc. These belts can be supplied with rubber covers, friction surface, or bareback. We can supply V-guides, banner edges, cleats, drive lugs, and rough top surfaces.

FLAT BELTING (TRULY ENDLESS)

Per Foot	Weight P.I.W. Inches	Thickness	Cord
Compass® L (Drum Cured)	0.0614	9/64	Rayon
Compass L (Press Cured)	0.0940	13/64	Rayon
Compass M (2″ to 9″ wide incl) (1 x 2 env)	0.0990	15/64	Rayon
Compass M (10″ to 28″ wide incl) (2 x 3 env)	0.1470	21/64	Rayon
Compass C	0.1640	21/64	Polyester
Compass H	0.1820	3/8	Polyester
Compass 250 (4″ to 36″)	0.1460	11/64	Steel
Compass 250 (4″ to 36″)	0.1740	15/64	Steel
Compass 250 (10″ & over)	0.2000	19/64	Steel
Compass 450 (to 10″)	0.2110	17/64	Steel
Compass 450 Steel (10″ & over)	0.2470	21/64	Steel

For figuring belt weights on all Compass Belting with Rubber Covers, add the following:

COVERS — PIW 1/32″ Ga. Lbs/Ft

Wingprene® — ORS	Rubber — ABR
.0196 lb.	.0160 lb.

Other Useful Compass Endless Belt Information:

Drum Cured	Min. Width	Max. Width	Min. Length	Max. Length
Compass L	1″	10″	24½″	120″
Compass M	2″	28″	24½″	169⅝″

Press Cured	Min. Width	Max. Width	Min. Length	Max. Length
Compass M	2″	36″	120″	135′
Compass C	4″	36″	120″	135′
Compass H	4″	36″	120″	135′
*Compass 250 Steel	4″	36″	120″	135′
Compass 450 Steel	10″	36″	120″	135′

Press Cured belts 30″ to 34″ wide require a minimum length of 14′ (168″).
Press Cured belts above 36″ wide require a minimum length of 17′ (204″).

* Compass 250 Steel belts under 120″ maximum width of 18″, over 120″ limitations do not apply (up to 38″).

NOTE: Belting made by continuous build endless method has a length tolerance of plus or minus 1%.

TRULY ENDLESS BELTS
AVAILABLE DRUM SIZES

Drum Built Belts are made only in raw-edge construction in lengths shown below.
Lengths other than shown below are available with procurement of tooling. Contact Customer Service for availability.

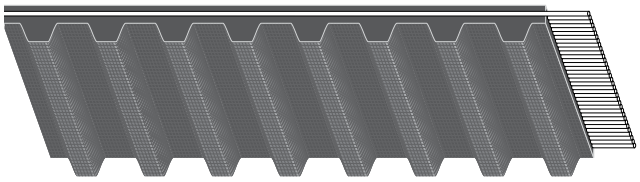
Cotton Cleaner



Part No: 64 CCB
64 64″ Pitch Length
CCB 1″ Pitch

Applications

Synchronous belts specially designed for driving the cylinders on Cotton Gin Incline cleaner machines.

Key Features & Benefits

- Steel tensile cords.
- Long service life in harsh environments.

Size	Pitch Length	No. of Teeth

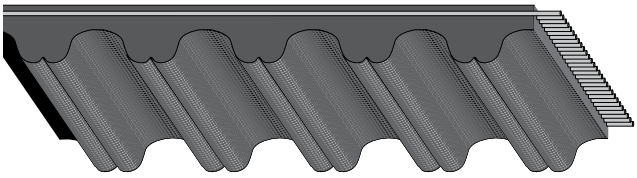
AXIAL FAN Pd® BELTS



Part No: 3150 14M 55\FFAN

3150	3150mm Pitch Length
14	14mm Pitch
55	55mm Wide
\FFAN	Special Fin Fan® Construction

APPLICATIONS

Specific application power transmission synchronous belts used primarily in the chemical, petroleum, and refining industries.

KEY FEATURES & BENEFITS

- Special Fin Fan construction.
- Universal tooth profile drops into existing HTD sprockets.
- Quiet tooth engagement.
- High-grade engineered rubber compound.
- Fiberglass tension cords for excellent resistance to shrinkage/elongation.
- Oil, heat, ozone, and abrasion resistance.
- Low-maintenance/high-efficiency rating.

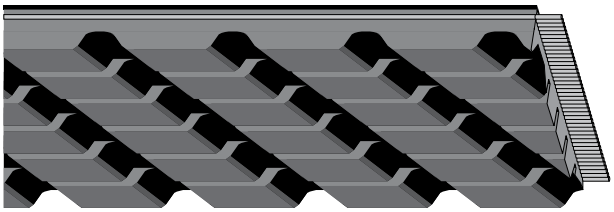
GATORBACK® POLY-V® BELT

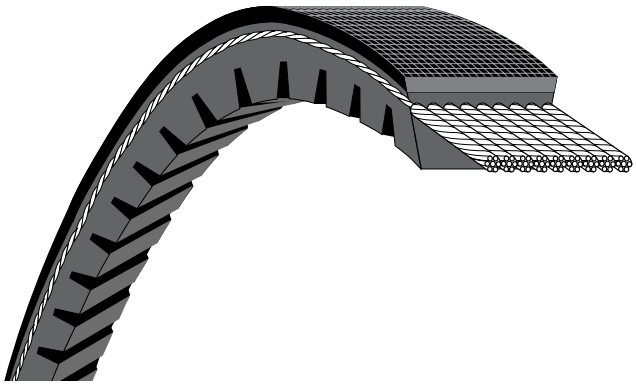


Part No: 4061025
- 4 K Section Poly-V
- 06 6 Ribs
- 1025 102 5/10 Length

APPLICATIONS
For passenger cars and light- and heavy-duty trucks.

KEY FEATURES & BENEFITS
- Specially treated tension members to maintain tension and resist elongation on both locked center drives and spring tension systems.
- Fiber-reinforced rubber helical cogged ribs offer maximum cord support and wear resistance for unsurpassed performance in high horsepower applications.
- The backing is tough, coated fabric material impregnated with premium rubber for heat and oil resistance to provide high coefficient of friction needed to drive flat pulleys.
- Unique helical cog design runs quieter than standard cogged belts.

GATORBACK V-BELT

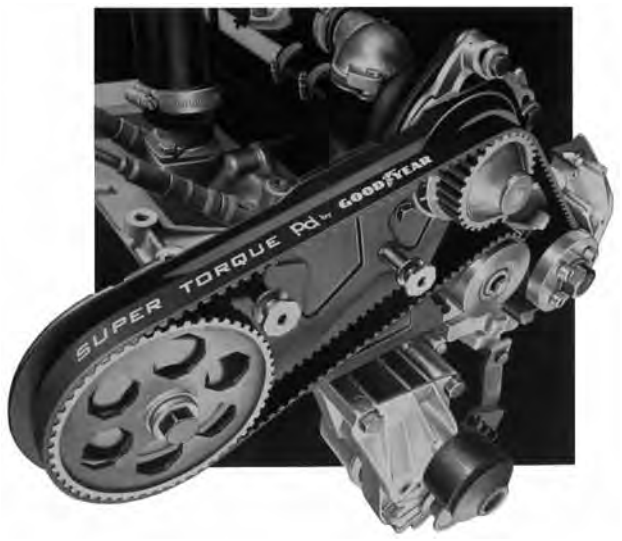


Part No: 15456
- 15 15/32″ Top Width
- 456 45 6/8″ Outside Length

APPLICATIONS
For passenger cars and light- and heavy-duty trucks.

KEY FEATURES & BENEFITS
- High-strength Vytacord® tension members resist shockload failure. Low-elongation properties assure uniform performance over the long life of the belt.
- Fiber-reinforced rubber helical cogs offer greater flexibility which reduces cracking and fatigue in the cushion member.
- Tension fabric impregnated with engineered oil-resistant rubber reduces surface fatigue and resists cracking.
- Rubber edges maintain positive, no-slip contact with pulley grooves for reliable energy transfer.

Timing Belt



Part No: 40138
40 Automotive Timing Belt
138 Industry Standard Description

Applications

Goodyear Engineered Products Timing belts are designed to deliver precise timing over a long service life in demanding automotive cam applications.

Key Features & Benefits

- Precision-molded teeth made of synthetic polymers provide high strength, shear resistance, and environmental resistance to assure long, dependable life.
- Specially woven and chemically treated fabric is impregnated with our high-grade rubber polymers to reduce pulley friction and provide outstanding resistance to abrasion, oil, and ozone.
- Special fiberglass tension members are dimensionally stable and high in strength, starting out precise and dependable and staying that way.
- Durable polymer backing protects the load-carrying cords from oil, abrasion, and ozone. It also keeps the cords in place so they pull together smoothly and evenly.

Truck Refrigeration Belt

Part No: 41047

Applications

Main drive belts for truck refrigeration units, especially designed for long life on mule drives and backside idler drives. Accessory drives are also found in the refrigeration units and are driven by Hex belts, Torque-Flex® belts, and Insta-Power® belts.

Key Features & Benefits

- Premium rubber-impregnated fabric resists oil, heat, and wear.
- High-strength Vytacord® tension members improve flex life, eliminate excess elongation, and increase resistance to shock loads.
- Cushion section is made of premium rubber to resist heat and wear.

Note: For an application guide and available sizes of Gatorback® V-belts, Poly-V® belts, Truck Refrigeration belts, Special Truck belts, and Timing belts, ask your distributor for the following catalogs:

BELT SIZE INFORMATION

HY-T® CLASSICAL V-BELTS/TORQUE-FLEX®

Section	Nominal Top Width	How to Obtain Effective Outside Length Up To 210″	How to Obtain Effective Outside Length Over 210″
A, AX	½″ (.500)	Add 2.1″ to Part Number Ex: A20 = 22.1″	Add 2.1″ to Part Number Ex: A220 = 22.1″
B, BX	21/32″ (.656)	Add 2.9″ to Part Number Ex: B100 = 102.9″	Add 1.4″ to Part Number Ex: B240 = 241.4″
C, CX	⅞″ (.875)	Add 4.2″ to Part Number Ex: C100 = 104.2″	Add 2.2″ to Part Number Ex: C240 = 242.7″
D, DX	1¼″ (1.250)	Add 5.2″ to Part Number Ex: D180 = 185.2″	Add 2.7″ to Part Number Ex: D240 = 242.7″
E	1½″ (1.500)	Add 7.0″ to Part Number Ex: E180 = 187.0″	Add 3.5″ to Part Number Ex: E360 = 363.5″

HY-T® WEDGE

Section	Nominal Top Width	Lengths
3V, 3VX	⅜″ (.375)	Belt Number indicates nominal
5V, 5VX	⅝″ (.625)	Outside Length
8V	1″ (1.000)	Example: 3VX475 = 47.5″

FHP

Section	Nominal Top Width	Lengths
2L	¼″ (.250)	Belt Number indicates nominal
3L	⅜″ (.375)	Outside Length
4L	½″ (.500)	
5L	21/32″ (.656)	Example: 4L400 = 40.0″

POSITIVE DRIVE

Pitch	Distance from center of one tooth to center of next MXL = .080″ XL = .200″ L = .375″ H = .500″ XH = .875″ XXH = 1.250″
Width	Last digits of belt number are the width in inches and tenths Example: 240XL025 = ¼″ width
Length	First digits of belt number are the pitch length in inches and tenths Example: 240XL025 = 24.0″ Pitch length

POLY-V®

Section	Width per Rib	Thickness	Length
J	.092	.16	First digits are pitch length in inches and tenths
L	.185	.38	Example: 180J4 = 18.0″
M	.370	.66	J = Poly-V cross section 4 = number of ribs

VARIABLE SPEED

Top Width	First two digits of belt number indicate belt top width in sixteenths of an inch Example: 3226V585 = 32/16″ or 2″ top width
Angle	Second two digits of belt number indicate the pulley angle Example: 3226V585 fits a 26°-angle pulley
Length	Last digits of belt number are the pitch length Example: 3226V585 = 58.5″ pitch length

TECHNICAL INFORMATION

SPROCKET INSTALLATION

Follow all safety policies and requirements of federal, state, and local authorities, as well as the regulation of the employer, when working on power equipment. Always lock out the power source to the machinery before performing any work.

PREPARATION

OBJECTIVE: Verify that all necessary tools and parts are available and ready for installation.

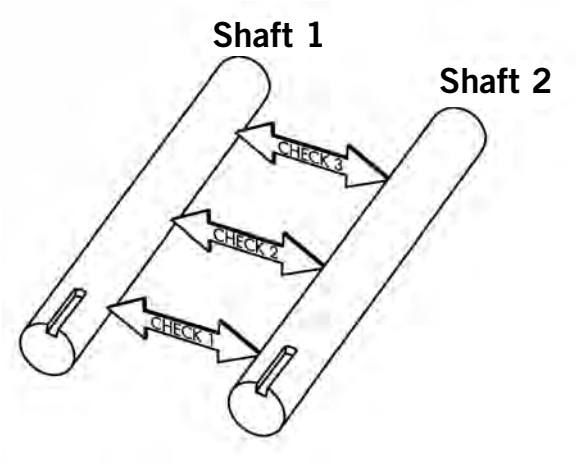
1. Eagle NRG™ belts and sprockets are identified with a unique Color Spectrum System. The seven colors used for identification are Yellow, White, Purple, Blue, Green, Orange, and Red. Each color represents a different size so that Blue belts are made to operate with Blue sprockets. Make sure the same color belt and sprockets have been obtained. When installing Falcon HTC®, Hawk Pd® and Blackhawk Pd®, it is also important that the correct sprocket width is used.
2. The following tools are recommended for proper belt and sprocket installation.
   - Straightedge
   - Socket and open-end wrenches
   - Torque wrench
   - Belt tension gauge
   - Laser Alignment
   - Tape measure
   - File and sandpaper
   - Clean cloth
   - Deflection force values for tensioning the belt
3. Make sure the components are ready for installation. Clean all shafts, removing any nicks or burrs. Clean all mating surfaces of the sprocket, bushing, and shaft. No lubrication or anti-sieze solution should be used on any of these surfaces, including threaded holes. Use of lubrication can create higher torque, which will cause premature failure.
4. Make sure the shafts are true and parallel by accurately measuring the distance between the shafts at three points along the shaft. The distance between the shafts should be the same at all three points as shown. Also make sure the shafts are rigidly mounted. Shafts should not deflect when the belt is tensioned.

See pages 129 – 130 for tools offered and how to order.

SPROCKET & BUSHING INSTALLATION

OBJECTIVE: Align the sprockets and secure them to the shafts.

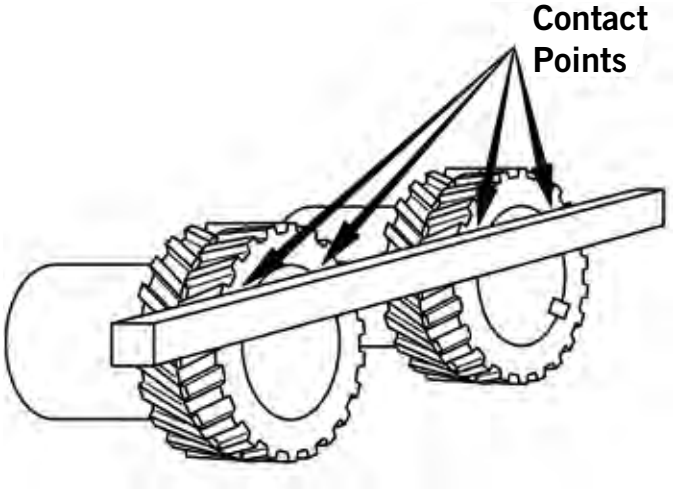
1. For conventional mounting, insert bushing into the sprocket, aligning the tapped holes in the bushing flange with the drilled holes in the sprocket hub.
2. Insert capscrews through the drilled holes and into the tapped holes.
3. Insert the key into the keyseat of the shaft.



TECHNICAL INFORMATION

4. With capscrews to the outside, place the sprocket and bushing assembly on the shaft, positioning the assembly with the bushing flange towards the shaft bearings. Reverse mounting the "Quick Detachable" (QD) bushing can be advantageous for some applications.
5. Repeat Steps 1 – 4 for the other sprocket.
6. Check that the teeth of both sprockets are pointing in the same direction when installing Eagle NRG™ sprockets.
7. Snug the capscrews so that the sprocket/bushing assembly can still move on the shaft.
8. Align the sprockets using a straightedge. Check for contact in four places as shown. Do not use bearings or drive shafts as reference points for sprocket alignment. Goodyear Engineered Products Laser Alignment Tool provides an alternative method for checking alignment.
9. Using a torque wrench, tighten the capscrews to the torque values listed below. If there is not a gap of 1/8" to ¼" between the bushing flange and the sprocket hub then disassemble the parts and determine the reason for the faulty assembly.
10. The sprocket will draw onto the bushing during tightening. Always recheck alignment after tightening the capscrews. If alignment has changed, return to Step 7.
11. Tighten the setscrews over the keyway to the torque values listed in the table to the right.
12. If the sprockets are straight bore, use the above alignment procedure and then tighten the setscrews to the correct torque for the setscrew size listed in the Torque Specifications table.

QD bushings can be installed with the capscrews on either side, excluding H, M, and N sizes. Drives with opposing shafts require one of the sprockets be mounted with the capscrews on the flange side and one with the capscrews on the hub side.



Torque Specifications

Bushing	Capscrew Torque		Setscrew Torque	Setscrew Size
	(in-lb)	(ft-lb)	(in-lb)	(in)
H	108	9	–	–
SH	108	9	87	1/4
SDS	108	9	87	1/4
SK	180	15	87	1/4
SF	360	30	166	5/16
E	720	60	290	3/8
F	900	75	290	3/8
J	1620	135	290	3/8
M	2700	225	290	3/8
N	3600	300	620	1/2

TECHNICAL INFORMATION

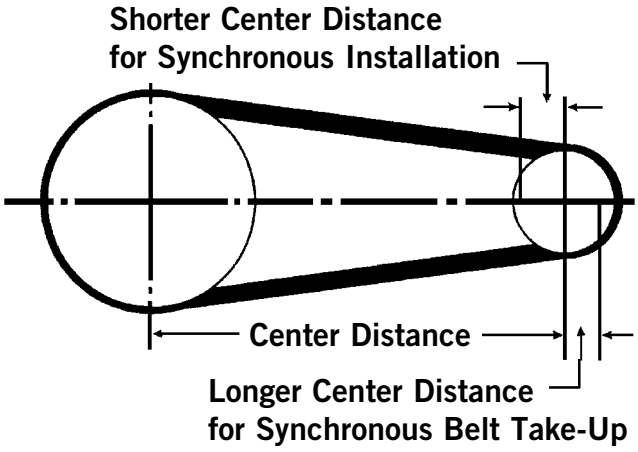
BELT INSTALLATION & TENSIONING

OBJECTIVE:

Goodyear Engineered Products Synchronous timing belts must be installed and tensioned properly to ensure optimum performance. Sprocket alignment must be preserved while tensioning the drive.

Before beginning, inspect the belt for damage and verify that the sprockets are properly mounted. Refer to sprocket and bushing manufacturer installation procedure. Belts should never be crimped or bent to a diameter less than the minimum sprocket diameter, approximately 2.5 inches for 8mm belts and 5 inches for 14mm belts.

1. Shorten the center distance or release the tensioning idler to install the belt. Do not pry the belt onto the sprocket. Refer to the following Center Distance Allowance tables for required center distance adjustment.



Apply the following center distance allowances for the Hawk Pd® and Falcon HTC®. A center distance adjustment, or decrease in center distance, is necessary to install a belt. In addition, an increase in center distance will be necessary for proper tensioning. If you install a belt together with sprockets, allow the following decrease in center distance for installation and an increase in center distance for tensioning.

Pitch Length Range (mm)	Allowance (Decrease) for Installation 8M, 14M Belts (mm/in)	Allowance (Increase) for Take-Up 8M, 14M Belts (mm/in)
Less than 1525	2.5/0.1	2.5/0.1
1525-3050	5.0/0.2	5.0/0.2
Greater than 3050	7.5/0.3	7.5/0.3

If you install a belt over one flanged sprocket and one unflanged sprocket with the sprockets already installed on the drive, allow the following decrease in center distance for installation and increase in center distance for tensioning.

Pitch Length Range (mm)	Allowance (Decrease) for Installation 8M Belts (mm/in)	14M Belts (mm/in)	Allowance (Increase) for Take-Up 8M, 14M Belts (mm/in)
Less than 1525	22.5/0.9	36.5/1.4	2.5/0.1
1525 –3050	25.0/1.0	39.0/1.5	5.0/0.2
Greater than 3050	27.5/1.1	41.5/1.6	7.5/0.3

If you install the belt over two flanged sprockets that are already installed on the drive, allow the following decrease in center distance for installation and increase in center distance for tensioning.

Pitch Length Range (mm)	Allowance (Decrease) for Installation 8M Belts (mm/in)	14M Belts (mm/in)	Allowance (Increase) for Take-Up 8M, 14M Belts (mm/in)
Less than 1525	34.5/1.4	59.2/2.3	2.5/0.1
1525-3050	37.0/1.5	62.0/2.4	5.0/0.2
Greater than 3050	39.5/1.6	64.5/2.5	7.5/0.3

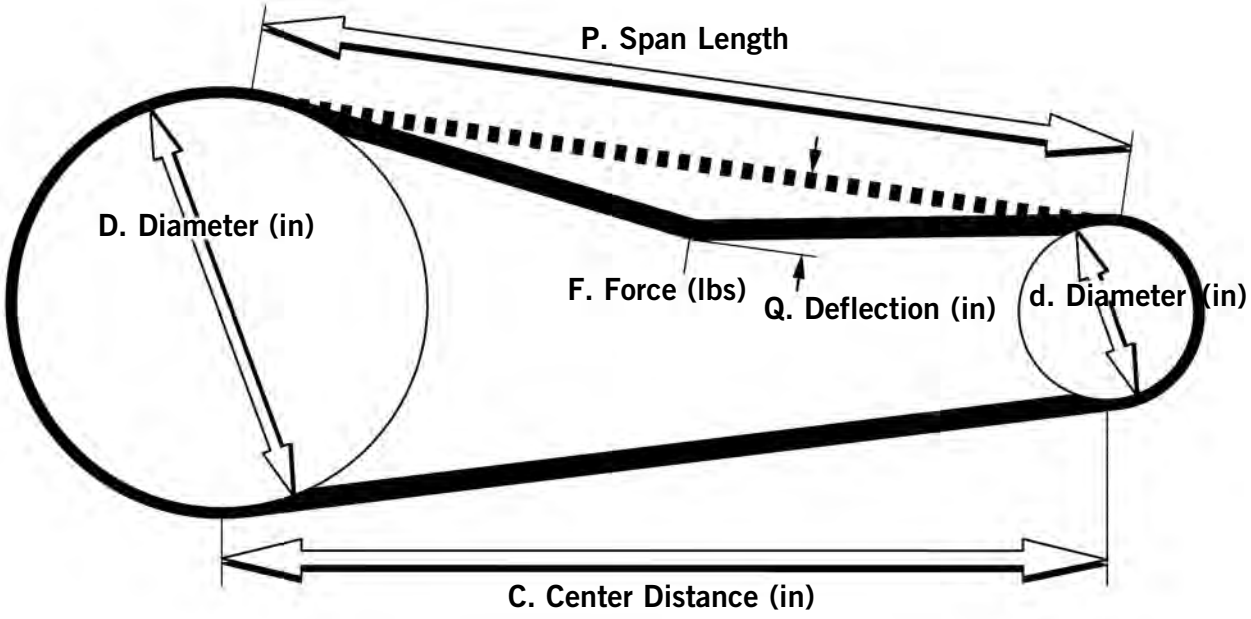
Consider the following center distance allowances when installing Eagle NRG™ sprockets. Since flanges are not necessary on Eagle NRG drives, only one table of center distance allowances is provided.

Pitch Length Range (mm)	Allowance (Decrease) for Installation 8M Belts (mm/in)	14M Belts (mm/in)	Allowance (Increase) for Take-Up 8M, 14M Belts (mm/in)
Less than 1525	10.1/0.4	15.2/0.6	2.5/0.1
Greater than 1525	15.2/0.6	17.8/0.7	5.0/0.2

2. Place the belt on each sprocket and ensure proper engagement between the sprocket and belt teeth.
3. Lengthen the center distance or adjust the tensioning idler to remove any belt slack.
4. Using a tape measure, measure the span length of the drive. Refer to dimension "P" in the diagram below. The span length can be calculated using the below formula.

TECHNICAL INFORMATION

5. Place a straightedge or reference line across the top of the belt.
6. Determine the proper deflection force to tension the belt. Deflection forces are given in the following tables. Deflection forces are also given on the output of the MaximizerPro™ computer drive analysis.
   a) If using a tension gauge, the deflection scale is calibrated in inches of span length. Check the force required to deflect the belt the proper amount. There is an O-ring to help record the force. If the measured force is less than the required deflection force, lengthen the center distance. If the measured force is greater than the required deflection force, shorten the center distance. See chart on page 119 for deflection values and tension gauges available.
   b) If using other means to apply force to the belt, adjust the center distance so that the belt is deflected 1/64 per inch of span length when the proper force is applied. See chart on page 119 regarding TensionRite® Belt Frequency Meter which calculates belt tension by measuring span vibrations.
7. After the belt is properly tensioned, lock down the center distance adjustments and recheck the sprocket alignment.
8. If possible, run the drive for approximately 5 minutes with or without load. Stop the drive and lock out the power source and examine alignment, capscrew torque and belt tension. Adjust the center distance to increase the belt tension to the "New" value in the Table on page 86. Lock down the drive adjustments and recheck tension.
9. Recheck the belt tension, alignment, and capscrew torque after eight hours of operation to ensure the drive has not shifted.



F = Deflection Force
q = Deflection, 1/64" per inch of span length
C = Center Distance
D = Large Sprocket Pitch Diameter
d = Small Sprocket Pitch Diameter
P = Span Length

$$P = \sqrt{C^2 - \left(\frac{D-d}{2}\right)^2}$$

PART NUMBER

TensionRite Belt Frequency Meter (PN 20278454)

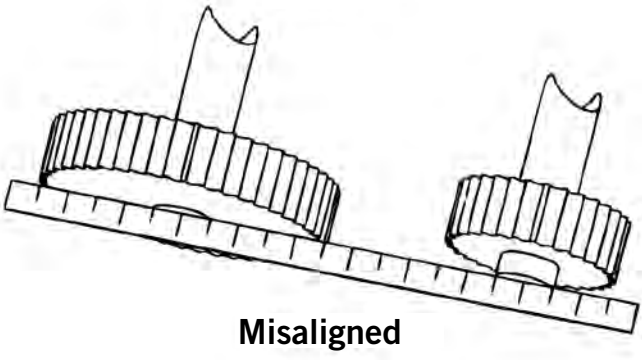
1. The table values are typically larger than necessary to cover the broad RPM range.
2. For drives where hub loads are critical and high speed drives or other drives with special circumstances, the table values (deflection force, installation tension) should be calculated.
3. Consult the Web site for detailed information on using the frequency-based tension gauges.
4. Veyance Technologies offers three different tension gauges for properly tensioning Eagle NRG, Hawk Pd or Blackhawk Pd belts. See your Goodyear Engineered Products sales representative or your local PTP industrial distributor for more information on the tension gauges listed on this page.

TECHNICAL INFORMATION

DRIVE ALIGNMENT

Synchronous belts are very sensitive to misalignment. The tension carrying member has a high tensile strength and resistance to elongation, resulting in a very stable belt product. Any misalignment will lead to inconsistent belt wear, uneven load distribution, and premature tensile failure. In general, synchronous drives should not be used where misalignment is a problem. Misalignment should be limited to ¼ degree or 1/16 inch per foot of center distance.

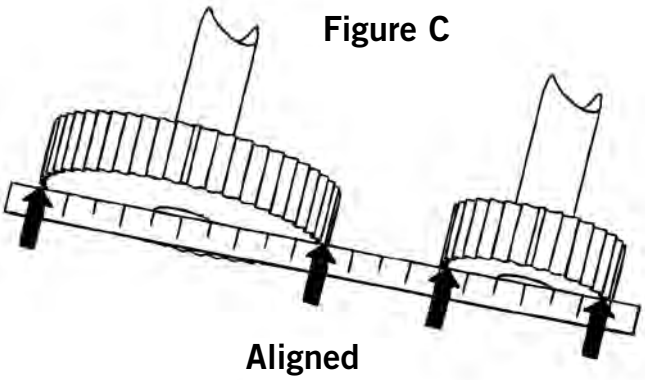
Figure A



Misaligned

Any degree of misalignment will reduce belt life and cause edge wear. Therefore, a straightedge should be used to check proper alignment verifying that sprockets and shafts are parallel, as in Figure C.

Figure C

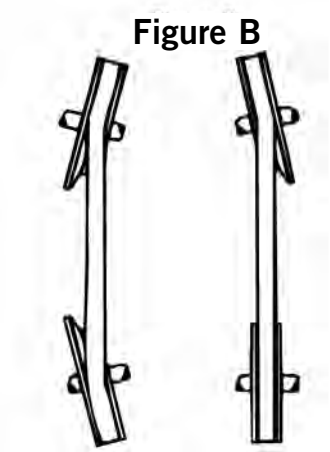


Aligned

Misalignment, at times, may cause tracking problems. Although some tracking is normal and will not affect belt performance, it may be caused by poorly aligned sprockets. Flanges may control a tracking problem. Considering a two-sprocket drive, belt contact on a single flange is acceptable. Belt contact with the opposite flanges of two sprockets should be avoided.

With parallel shafts, misalignment occurs when there is an offset between the sprocket faces as in Figure A. Misalignment also occurs when the shafts are not parallel as in Figure B.

Figure B

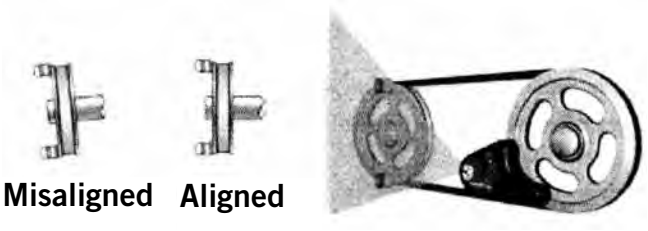


Correct Alignment

A straightedge should touch the sprocket at the four points indicated. Both front and back alignments should be checked.

Laser Alignment Tool

Goodyear Engineered Products Laser Alignment Tool provides an alternative to checking alignment with a straightedge. Each laser alignment tool comes with a rugged carrying case and detailed instructions to get you started with the quickest, easiest, and most versatile alignment tool on the market today.



Misaligned Aligned

Misalignment can also be attributed to the improper installation of a bushing or loose drive framework. Refer to sprocket manufacture guidelines for proper bushing installation. Secure motor and framework to eliminate vibration on center-to-center fluctuations.
